Abstract

The majority of problems that pop up during product creation have a non-technical root cause, for example in people, process, or organization issues. Organizations have many additional processes to support the business and to support the involved stakeholders, such as the architect. These additional processes also need evolution to stay fit for purpose. We discuss the role of the architect in the evolution of supporting processes.

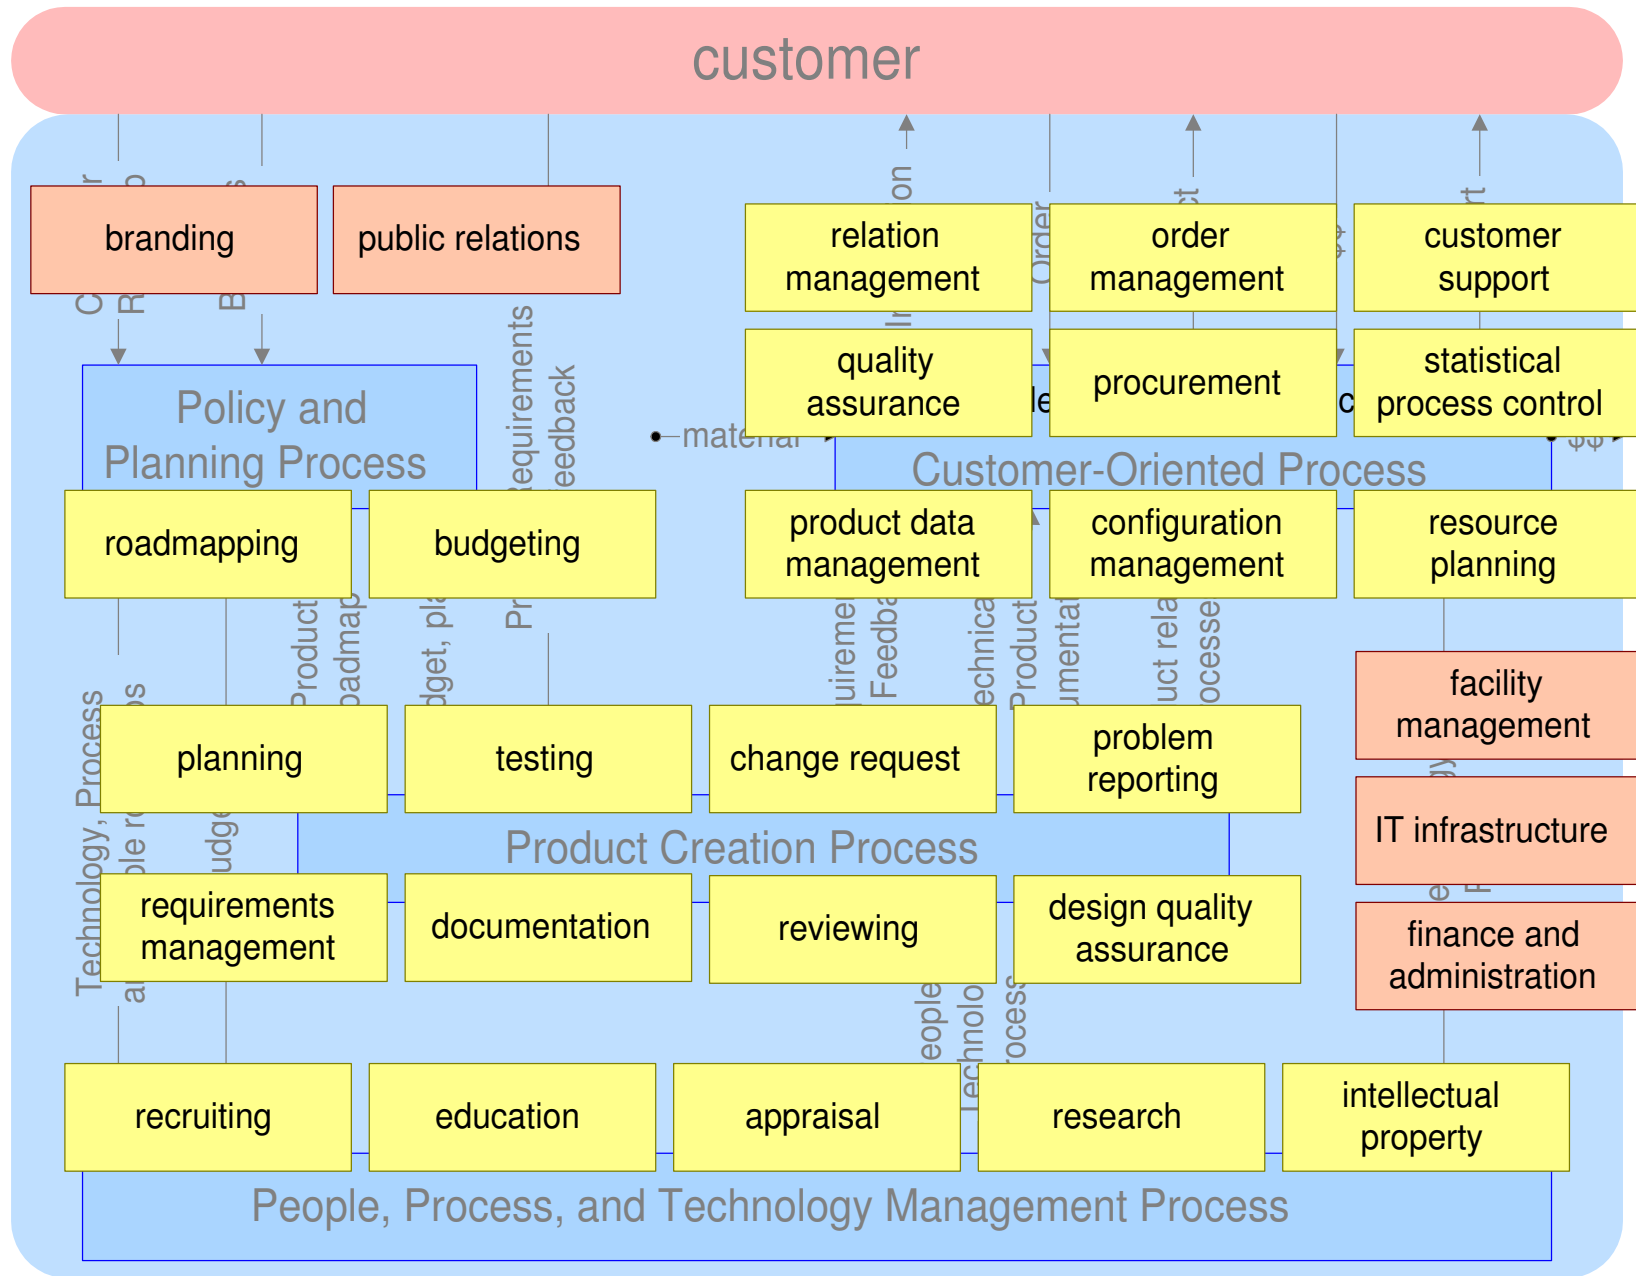

Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.
