Abstract

This is the homework for a course for bachelor students in systems engineering for the part architectural reasoning

Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

January 24, 2018

status: preliminary

draft

version: 1.4

Schedule

Monday January 16, 12:00 lecture, 13-16 class work

Thursday January 19, 11:00 lecture, 12-16 class work

Monday February 6, submit homework 1

Monday February 13, 12:00 lecture, 13-16 class work

Thursday February 16, 11:00 lecture, 12-16 class work

Monday March 7, submit presentation of homework 2

Monday April 4, submit individual reflection report of homework 2

Case during this course

Specify and design

an autonomous track/road maintainer for elderly Norwegians.

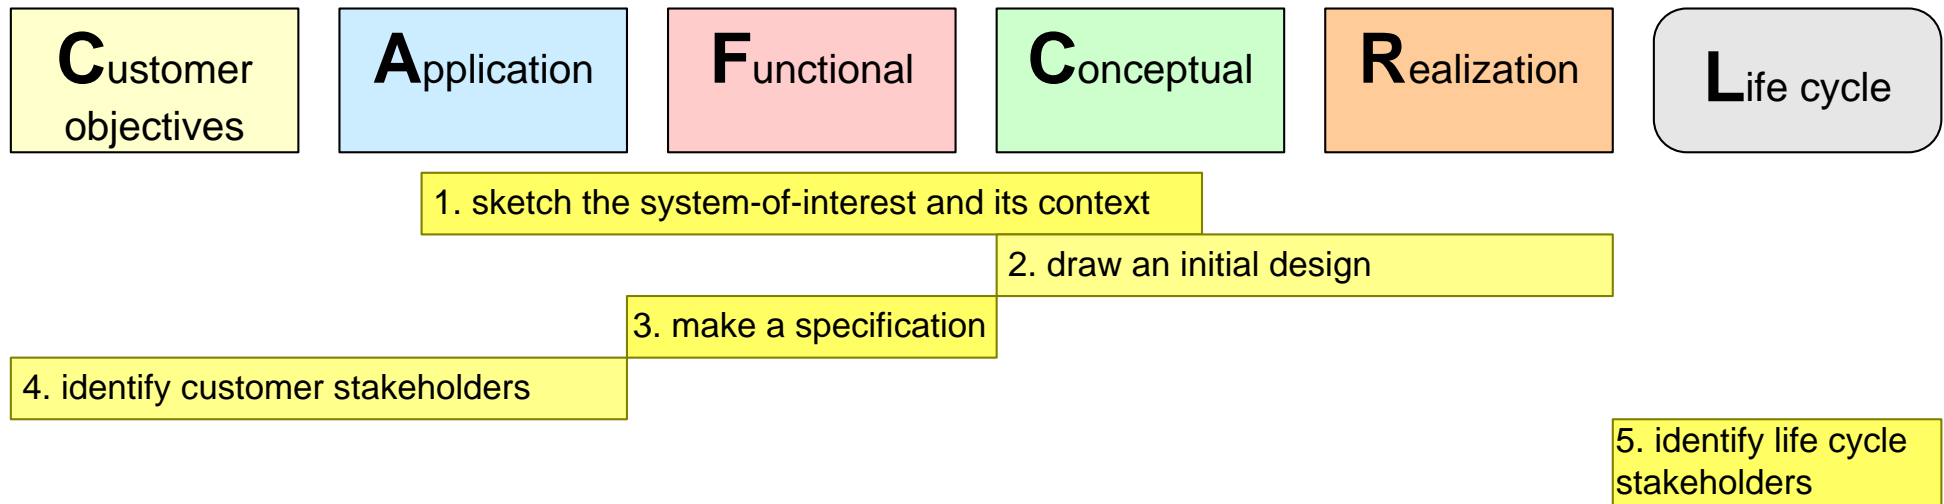

This robotic vehicle, amongs others, keeps the drive to their home fully operational (in winter).

Class-work Day 1: Exploration

Use time-boxes of 15 minutes and perform the following steps:

- Sketch the system-of-interest and its immediate context
 - Annotate the sketch (e.g. main components, interfaces, functions, ...)
- Draw an initial design
- Make a specification of the system-of-interest (view it as a blackbox)
 - What functionality, performance, interfaces, standards or regulations
- Identify the main customer stakeholders and their concerns
- Identify the main life cycle stakeholders and their concerns
- Review and make a plan to consolidate in a presentation

Class-work Day 1 mapped on CAFCR

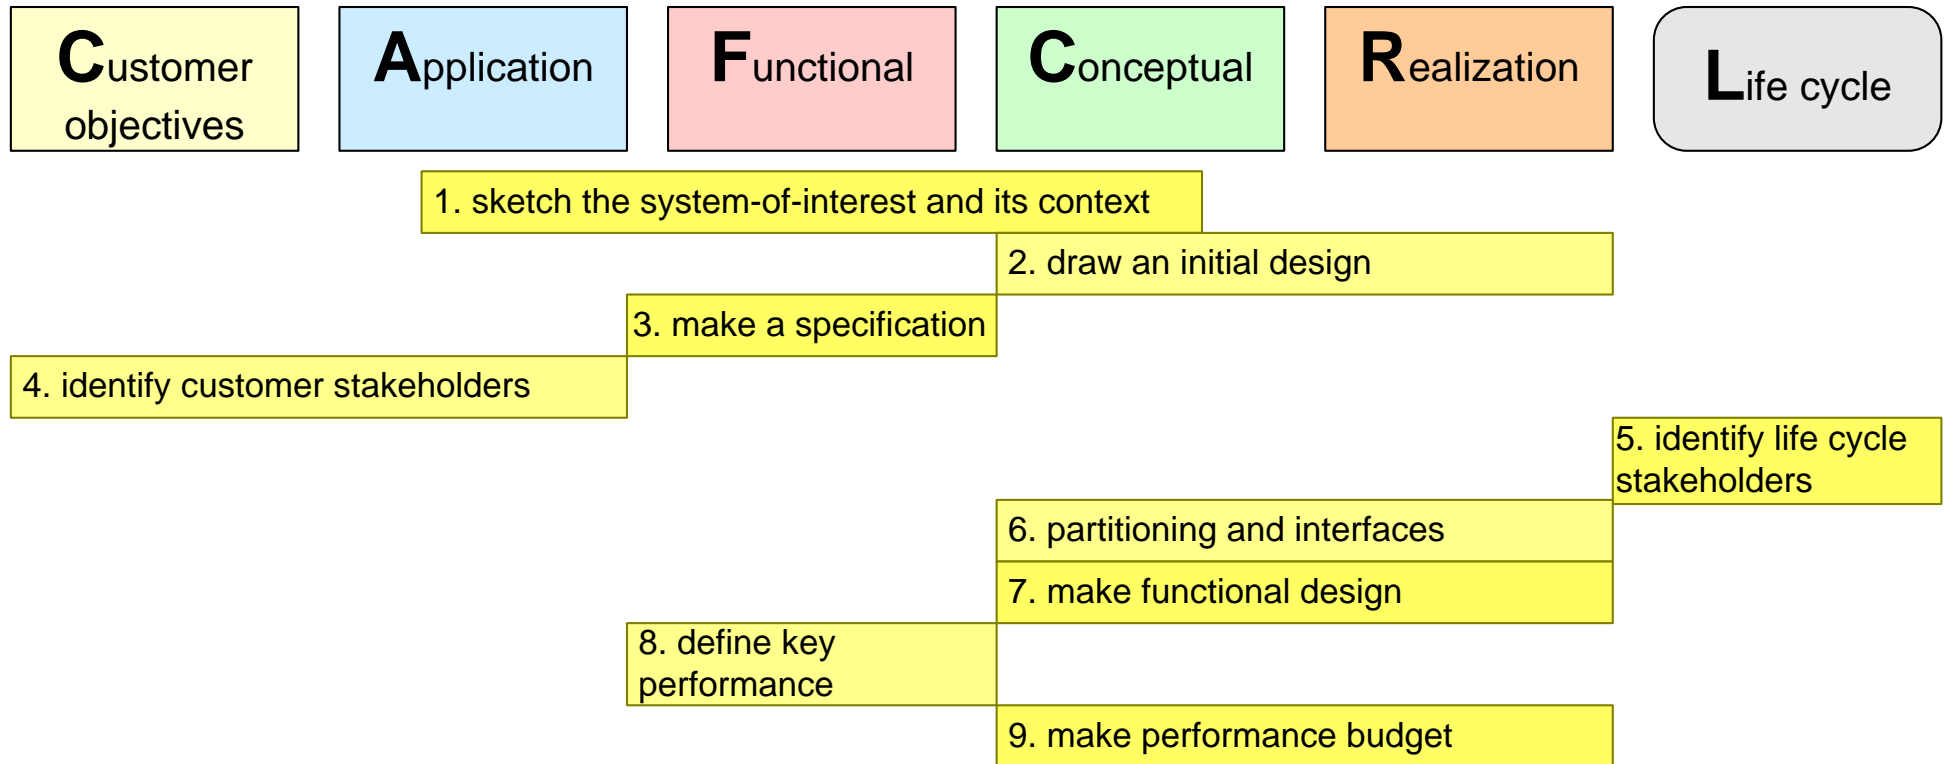

Class-work Day 2: Elaboration

Start second iteration by elaborating FCR views

Use time-boxes of about 30 minutes

- Decompose the system in subsystems, decompose one subsystem in subsubsystems.
 - Show the subsystems and interfaces in a block diagram
- Make a functional model of the internals of the system-of-interest
 - Use one or more diagrams to show the dynamic behavior
- Define 5..10 Key Performance Parameters of the system-of-interest
 - Define a use case to support the definition of KPPs
- Make a technical budget for one of the key performance parameters
- Review and make a plan to consolidate in a presentation

Class-work Day 2 mapped on CAFCR

Homework after Day 2

Transform your results in electronic form (e.g., PowerPoint or Visio)

Develop two alternative solutions/concepts

Compare the three solutions using a Pugh matrix

define 5..10 criteria for comparison

score the solutions on a scale from 1 (poor) to 5 (very good)

Make a list of questions triggered by the first iteration

Search for facts to ease the next class-work

Class-work Day 3: Elaboration CA-views

Continue second iteration by elaborating CA views

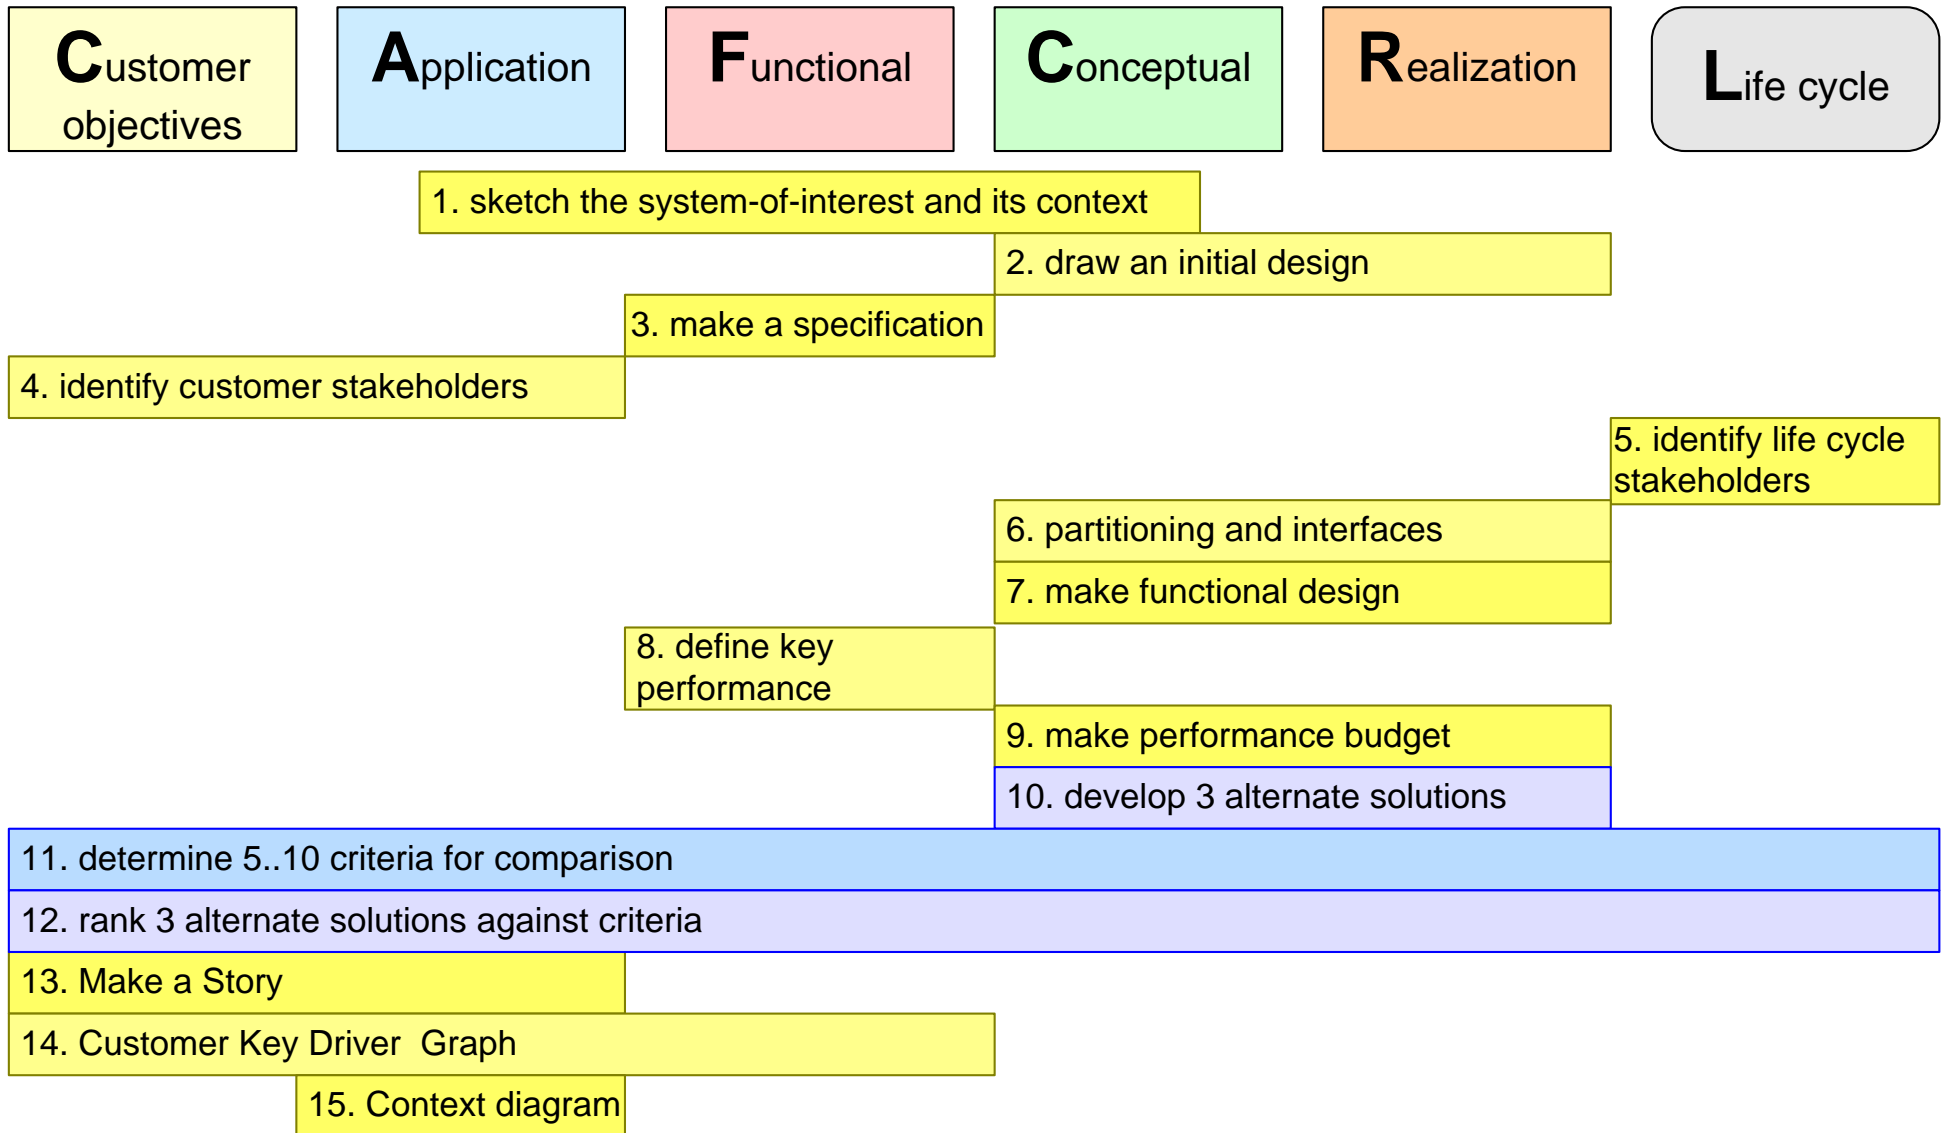

Use time-boxes of about 40 minutes

- Develop a story that helps you to understand the customer better and that facilitates analysis of specification and design
 - Verify your story against the story criteria
- Develop a customer key driver graph
 - Start with Key Performance Parameters and ask “why (is this needed)” repeatedly.

Use time-box of about 20 minutes for the remaining task

- Make a context diagram

Class-work Day 3 mapped on CAFCR

Class-work Day 4: Elaboration Life Cycle

Continue second iteration by elaborating life cycle view

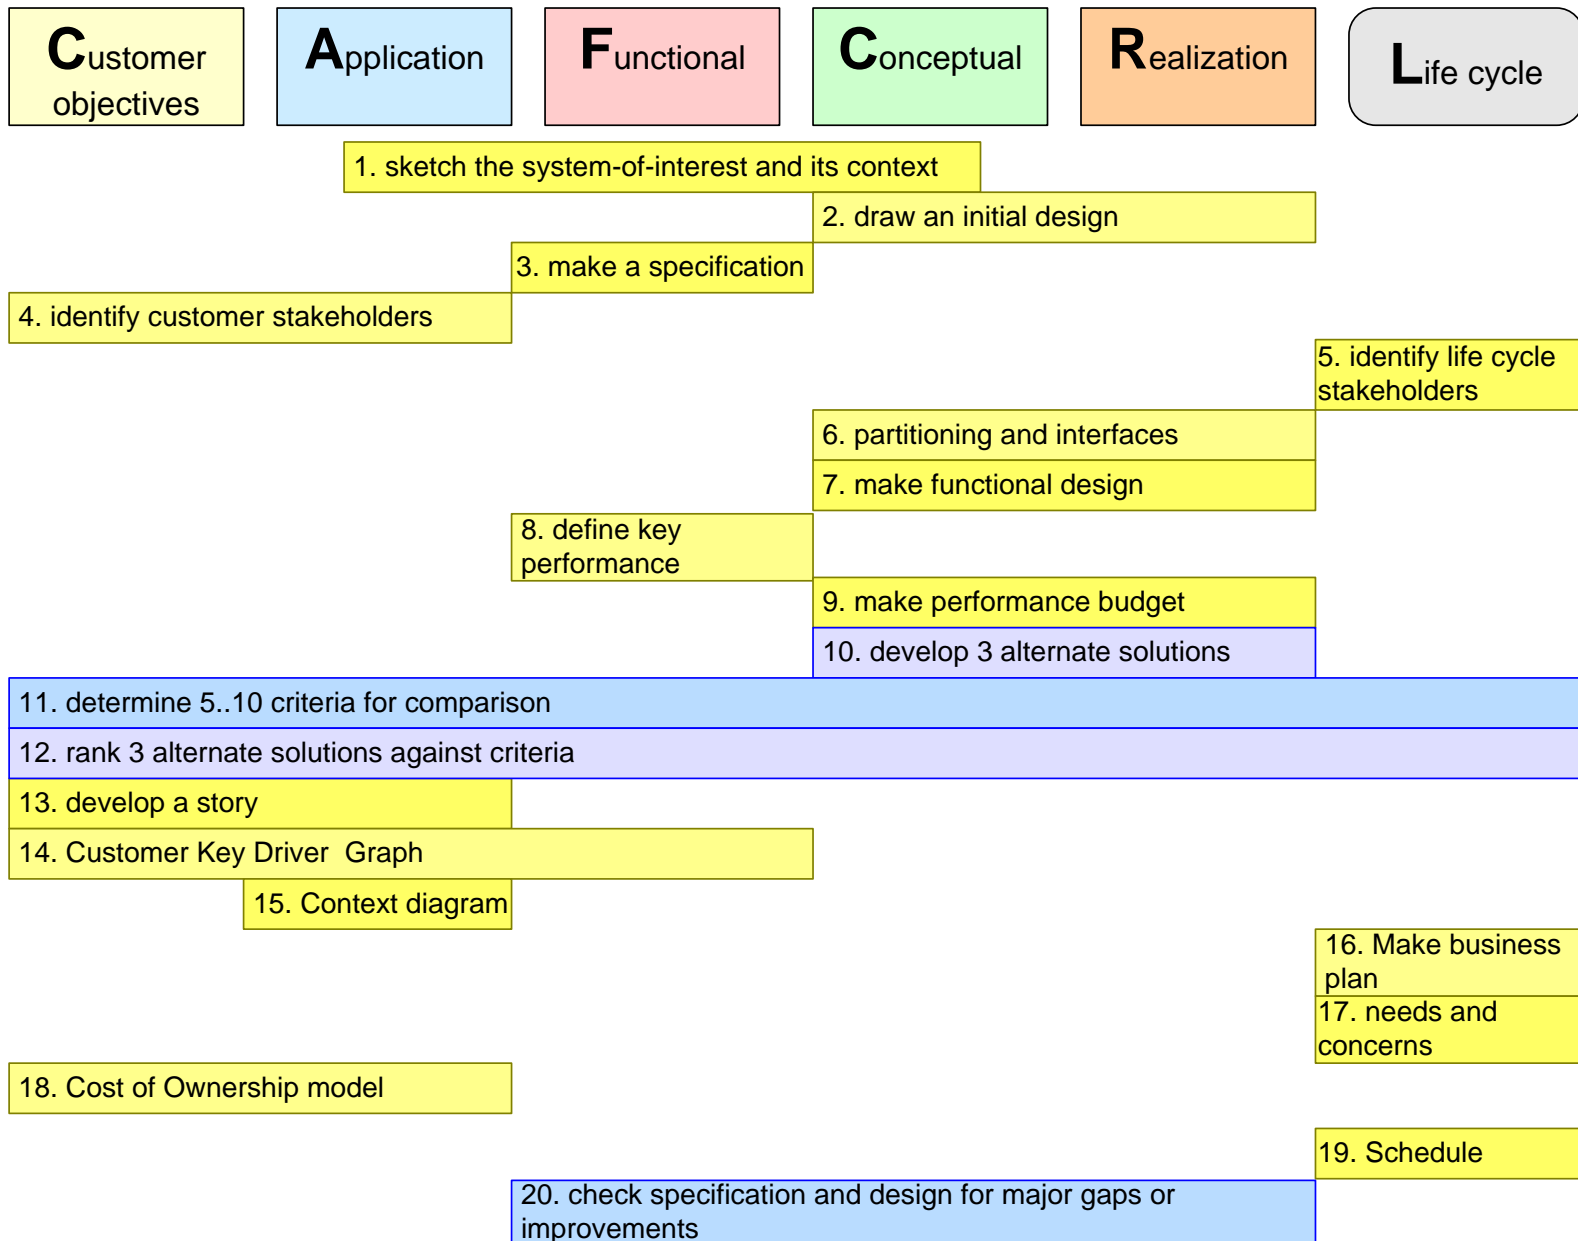

Use time-boxes of about 30 minutes

- Develop a business plan for your company
 - determine your role in the value chain
 - determine income, expenses, and investments
 - estimate cash flow as function of time
- Identify needs and concerns from life cycle stakeholders
 - determine life cycle key drivers and key performance parameters
- Make a Cost of ownership estimate for customers

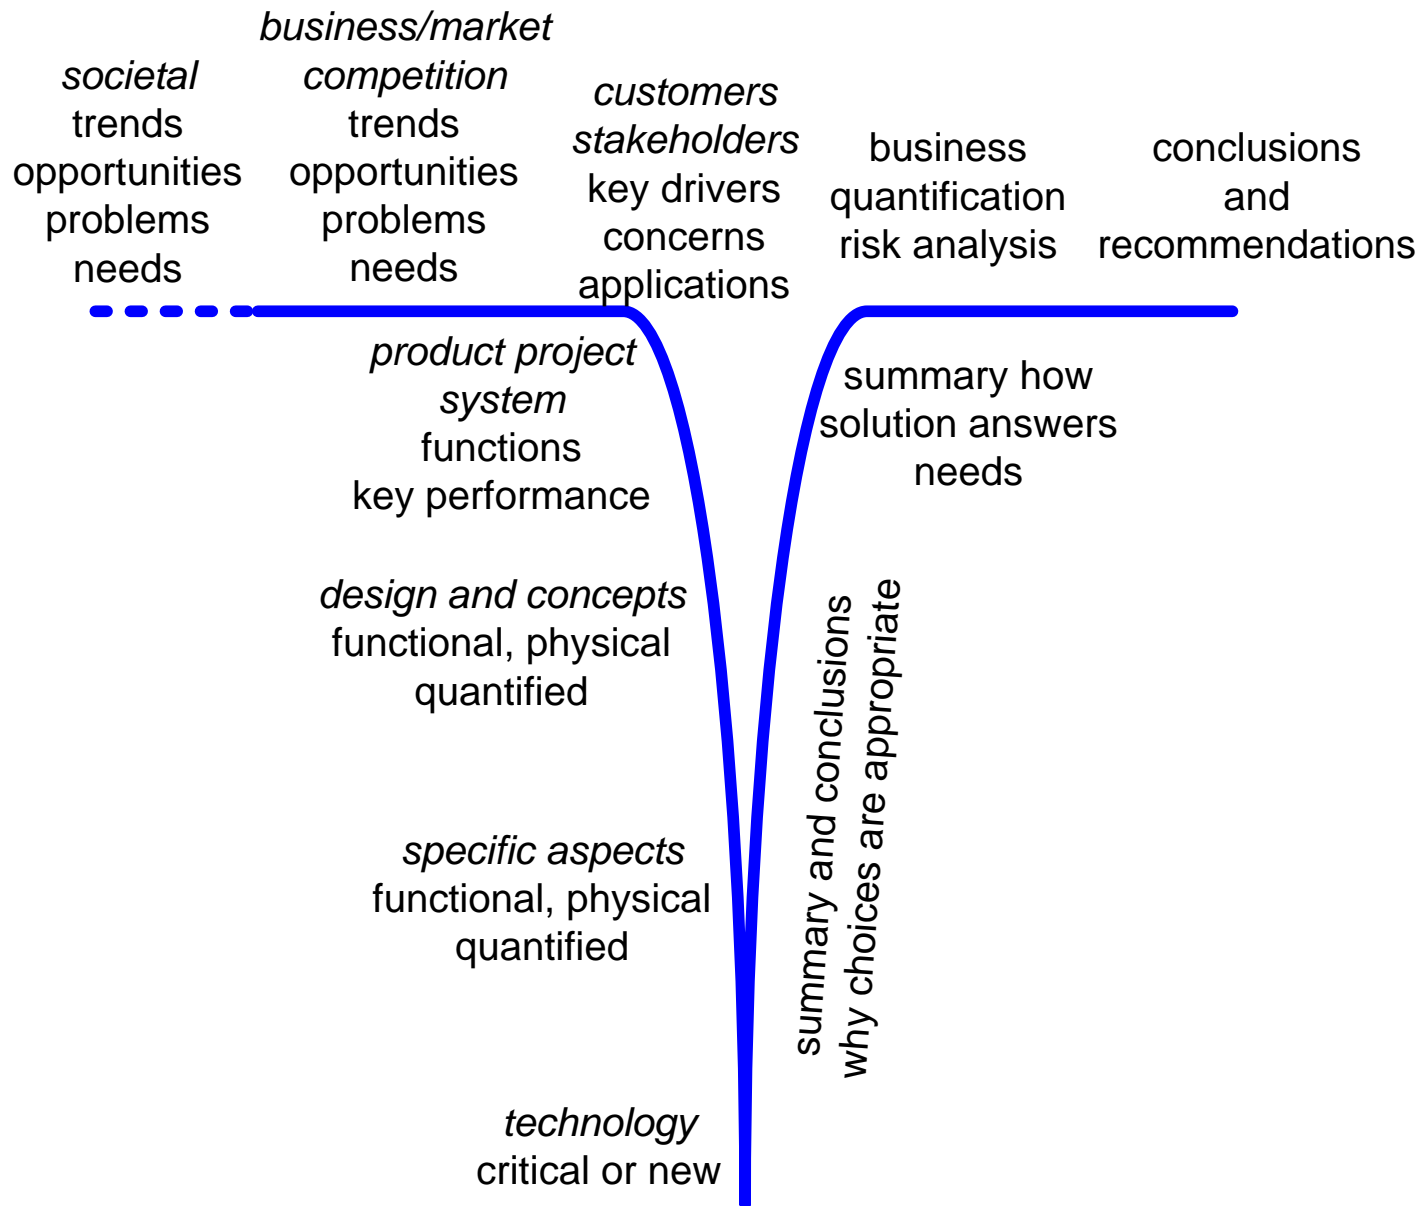

Use time-box of about 20 minutes for the remaining task

- Make a schedule for development and start of deployment

Class-work Day 4 mapped on CAFCR

T-shaped Presentation

Homework after Day 4

Check specification and design for major gaps or improvements

Transform your results in electronic form (e.g., PowerPoint or Visio)

Make a T-shaped presentation for your management; its main purpose is to take a go/no-go decision

Write an individual reflection report, max 2 A4s:

What are your main learning points?

What aspects deserve most attention in next phase of your project? Explain why.

Specify and design an
Unmanned Humanitarian Response/Support Vehicle,

which will be able to reach locations with
poor, bad, or destroyed access.

Specify and design
a full-electric
TukTuk
(versatile, urban, no emission)
