Abstract

The stakeholder part of the Embedded Systems Architecting (ESA) course is described. The program existing of 6 modules is described. The course format, iterating theory, illustration and interaction is explained.

Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

All Gaudí documents are available at:
<http://www.gaudisite.nl/>

1 Introduction

The Embedded Systems Institute, ESI, organizes an Embedded Systems Architecture Course, the so-called 4S course, see [3]. The 4 subjects of the course are: Silicon, Software, Systems and Stakeholders. This document describes the Stakeholder part of the 4S course.

2 Program

The program purposefully alternates process, business and technology views. Figure 1 shows the program of the stakeholder part. Normally this part of the course is given in a block of and a block of 3 days. The case is weaved into the program.

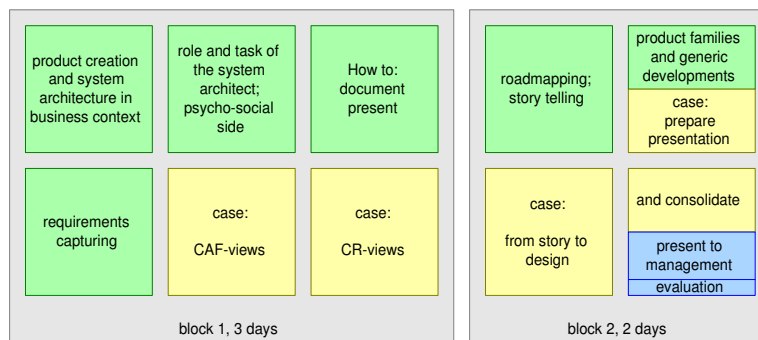

Figure 1: Program of the stakeholder part of the ESA course

The structure of the course is shown in figure 2. In other words the theory of the course is that theory, illustration and interaction will alternate.

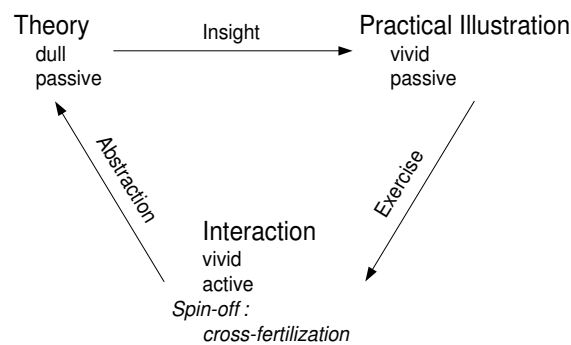

Figure 2: Alternation of theory, illustration and interaction will be used to maximize the educational effect

This alternation follows the general timing as presented in figure ??.

Figure 3: Timing per subject of the alternating theory, illustration and interaction

The first step is an interactive exploration of the subject. This exploration is followed by a "broadcast" lecture in which theory and illustration are given. The amount of illustration is "experimental", due to the industry wide target group; Examples will be based on experience of the trainer, while it is hoped that during the interaction the attendants will bring forward illustrations from their own environment.

The interaction is done in 2 steps: an interactive discussion with the entire class and a work session in smaller groups. The instruction for the group work is given during the interactive discussion.

The entire subject is closed by a short collective session with conclusions and evaluation.

3 Rules during the course

The rules of the broadcast part are:

- Please write your questions/remarks/statements on yellow stickers and attach them at the end on the P-flip.

These will be used in the interactive section for discussion and to increase insight.

- Short clarification questions are welcome,
Discussion will take place in the interactive part.
- Stupid questions don't exist. Learning is based on **safe** and **open** interaction.
Very individual-oriented questions can be referred to a break or after the session.

The rules of the interactive and the practice part are:

- Your contribution is essential.
- Don't monopolize the time. Everyone, also the quiet people, should have the opportunity to contribute.
The facilitator will intervene if the contribution is limited to a small group of participants.
- Respect the contribution of others.
Opinions can't be wrong, difference of opinion is normal and called pluri-formity.
- The course format is highly experimental and based on improvisation, constructive proposals are welcome.
It is your course! Regular evaluations will give the opportunity to influence the rest of the course.

4 Evaluations

Basic part of learning is the evaluation of what has been done. The course will use 3 types of evaluations:

- Personal expectations
- Benefit and Concerns on a regular base
- The CTT evaluation form

The personal expectations are recorded at the very beginning of the course. At the end we look back at these initial expectations. This has a two-way evaluation effect:

Personal Did you start with the right expectation level? Was it realistic? Did you achieve the learning goals formulated in this expectation?

Trainer and CTT Did we communicate the right information to enable people to select this course? Do we apply the right selection criteria?

The benefit and concern evaluation method is based on the basic feedback method, which prescribes to start with formulating the strong points, before addressing the weaker issues. The idea is that improvement is based on building on the strong points and to change with respect to the weaker issues. A side effect is that everyone is forced to think also about the positive aspects, not only about the negative.

The benefit and concern evaluation is done regular, in the beginning with a high frequency, to be able to adapt the course directly.

The benefits and concerns are collected by a brainstorm or on yellow stickers. The rule is that one should always start with a benefit before mentioning a concern.

The benefit and concern method is widely used by CAP Gemini employees, often called B&C or Beer&Chips.

The CTT evaluation form is the "standard" CTT evaluation form which evaluates the different aspects of the course.

History

Version: 2.0, date: July 8, 2003 changed by: Gerrit Muller

- repaired update

Version: 2.0, date: July 8, 2003 changed by: Gerrit Muller

- stakeholder part extended with 2 days for the case
- supporting processes replaced by "How to document, How to present"
- module generic developments at the end
- story telling added to module roadmapping
- program table replaced by figure
- session template adjusted

Version: 1.4, date: April 10, 2002 changed by: Gerrit Muller

- layout update

Version: 1.3, date: February 16, 2001 changed by: Gerrit Muller

- layout update

Version: 1.2, date: September 4, 2000 changed by: Gerrit Muller

- exchanged the position of "Requirements Capturing" and "Roadmapping"
