`www.gaudisite.nl`

## Abstract

Many simulations suffer from the fact that the investment and the maintenance costs more than the harvested value of the simulation results. In this presentation we show a light-weight approach to simulation. Key success factors are discussed to keep the simulation light-weight and to get useful results nevertheless.

### Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

# High Level Method

# High Level Method Stepwise

|   |  |
|---|--|
| 1A. Identify (customer) key drivers             | in terms of stakeholders and concerns  |
| 1B. Identify critical realization aspects       | for instance due to cost, performance, robustness, technological maturity, et cetera |
| 1C. Consolidate core domain know how            | make implicit know how explicit  |
| 2A. Identify tensions and conflicts             |  |
| 2B. Gather facts, identify uncertainties        | figures of merit, design rules   |
| 3A. Build small models<br><i>hours .. weeks</i> | addressing tensions, using facts, and creating insight in the uncertainties          |
| 3B. Perform measurements                        | for calibration and validation   |

- Iterate many times
- Provide overview by means of visualizations

# Success Factors Light Weight Simulation

Light weight simulation is based on  
research performed in the *Boderc* project.

Especially the work of

*Jan Beckers* (Océ) and *Maurice Heemels* (ESI)

has contributed.
