

Documentation Tools for Gaudí

by Gerrit Muller

Philips Research

IST - SWA - AmE

Abstract

The Gaudí project will produce a large number of articles and presentations about System Architecture. The first 3 months of the project were used for exploration of reader requirements, potential contents, distribution media and support tools.

This presentation shows the requirements, the choices and the underlying design of the tools to fulfil quest of making the art of system architecting more accessible and understandable.

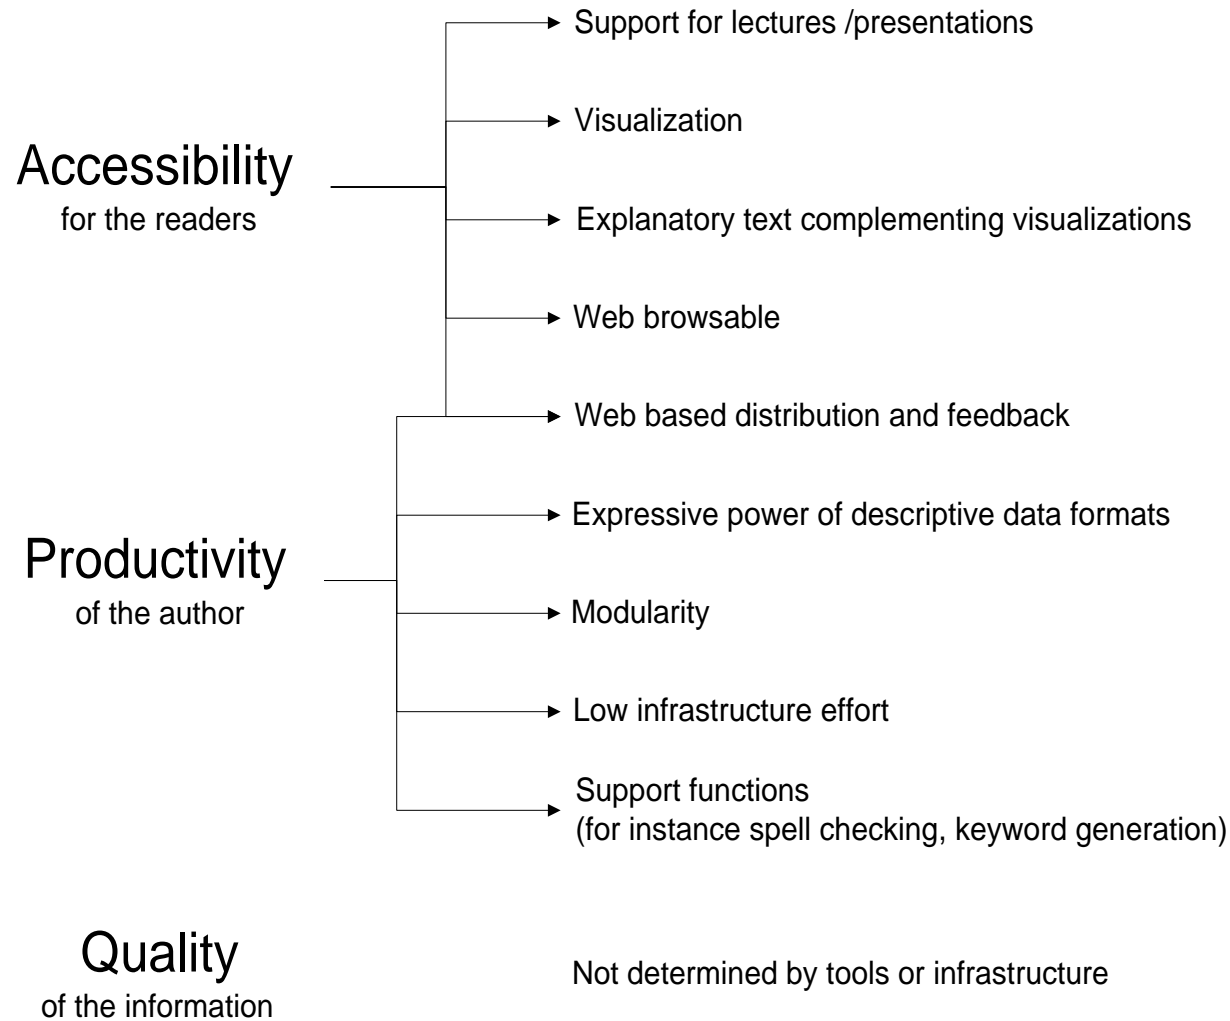

22nd December 1999

version: 1.0

Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

Key drivers of the user of documentation tools

Requirements

Output:

- Platform independent (1)
- Web enabled (2)
- High quality on paper (3)
- Fast scrolling enabled if viewed on monitor (4)
- Presentations enabled for electronic projection (5)

Management:

- Modularity of information (6)
- Minimal redundancy, limited use of copy paste (7)
- Separation of information and presentation (8)
- Low effort to create and maintain the tools (9)

Requirements continued

Source:

- Standard Format (10)
- Enabling version management, a.o. by supporting differencing (11)
- Platform Independence (12)
- Support for Rich Graphics, i.e. maintaining the structure of the information (13)
- Bibliography support, including symbolic citation support (14)
- Automatic generation of figure, table and page numbering with symbolic reference support (15)

Requirements continued

Use:

- Easy (16)
- User actions should have an intuitive and predictable result (17)
- Customizable, f.i. minimize user actions for frequent operations (18)
- Support for Graphics (19)

Requirements continued

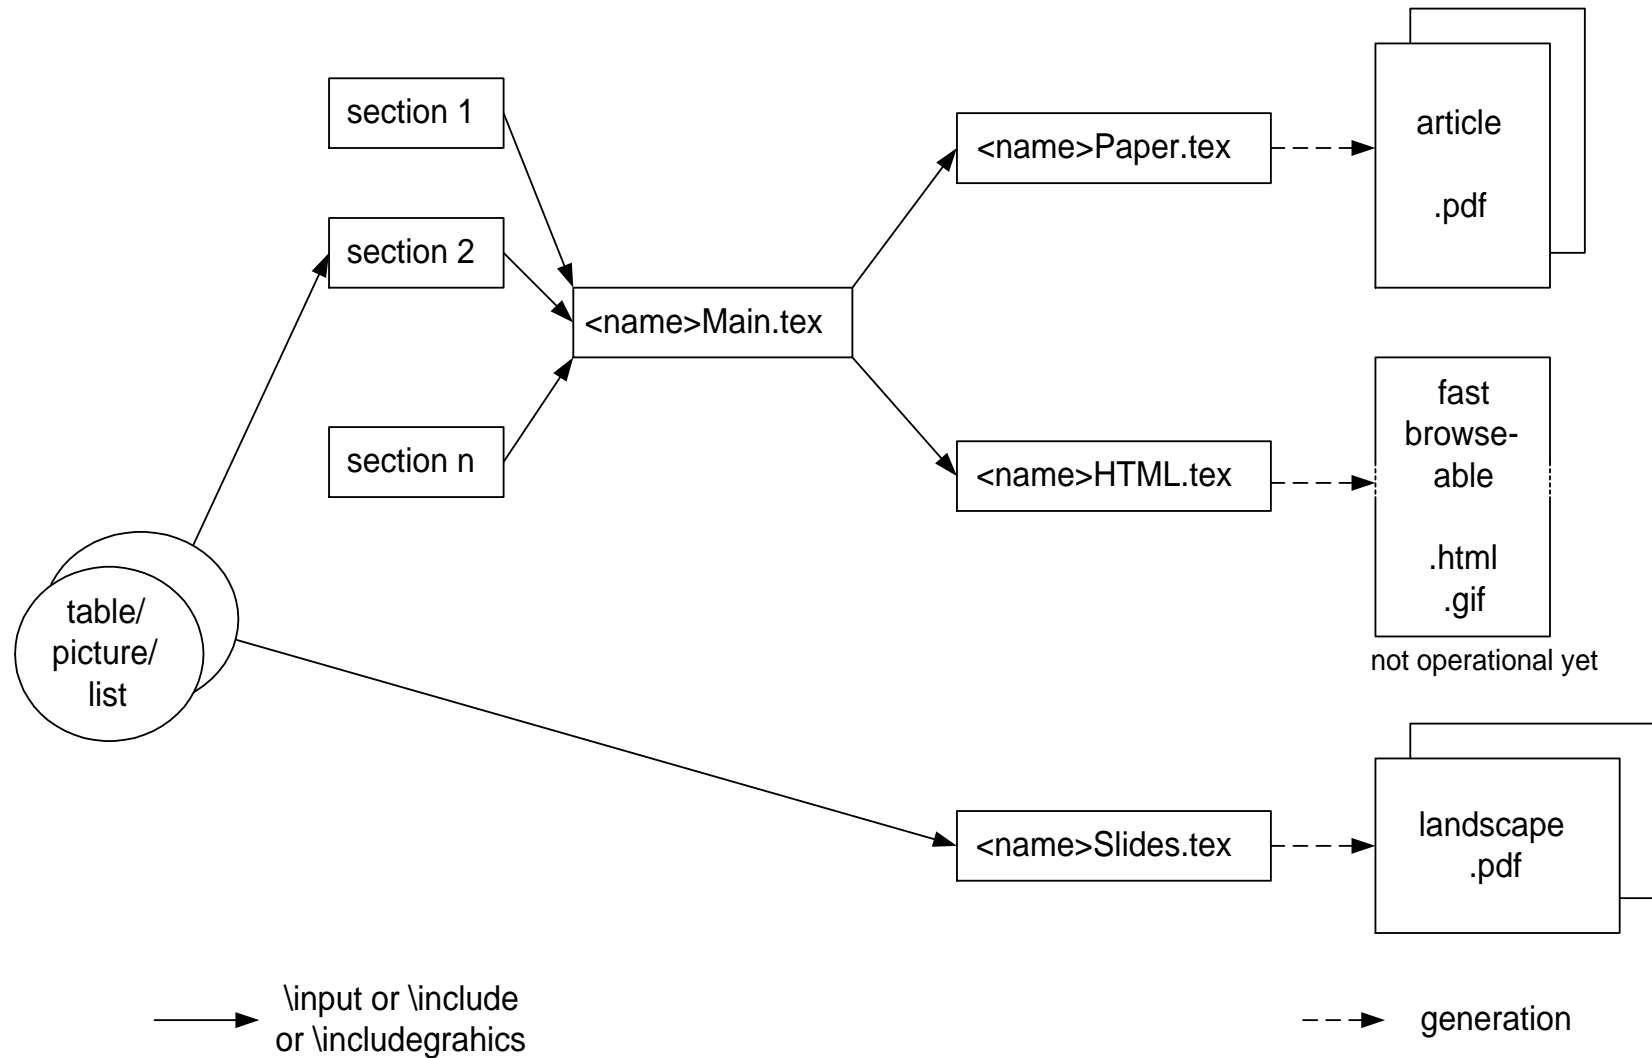

Design:

- Platform Independent (20)
- Extendability (21)
- Scalability (22)

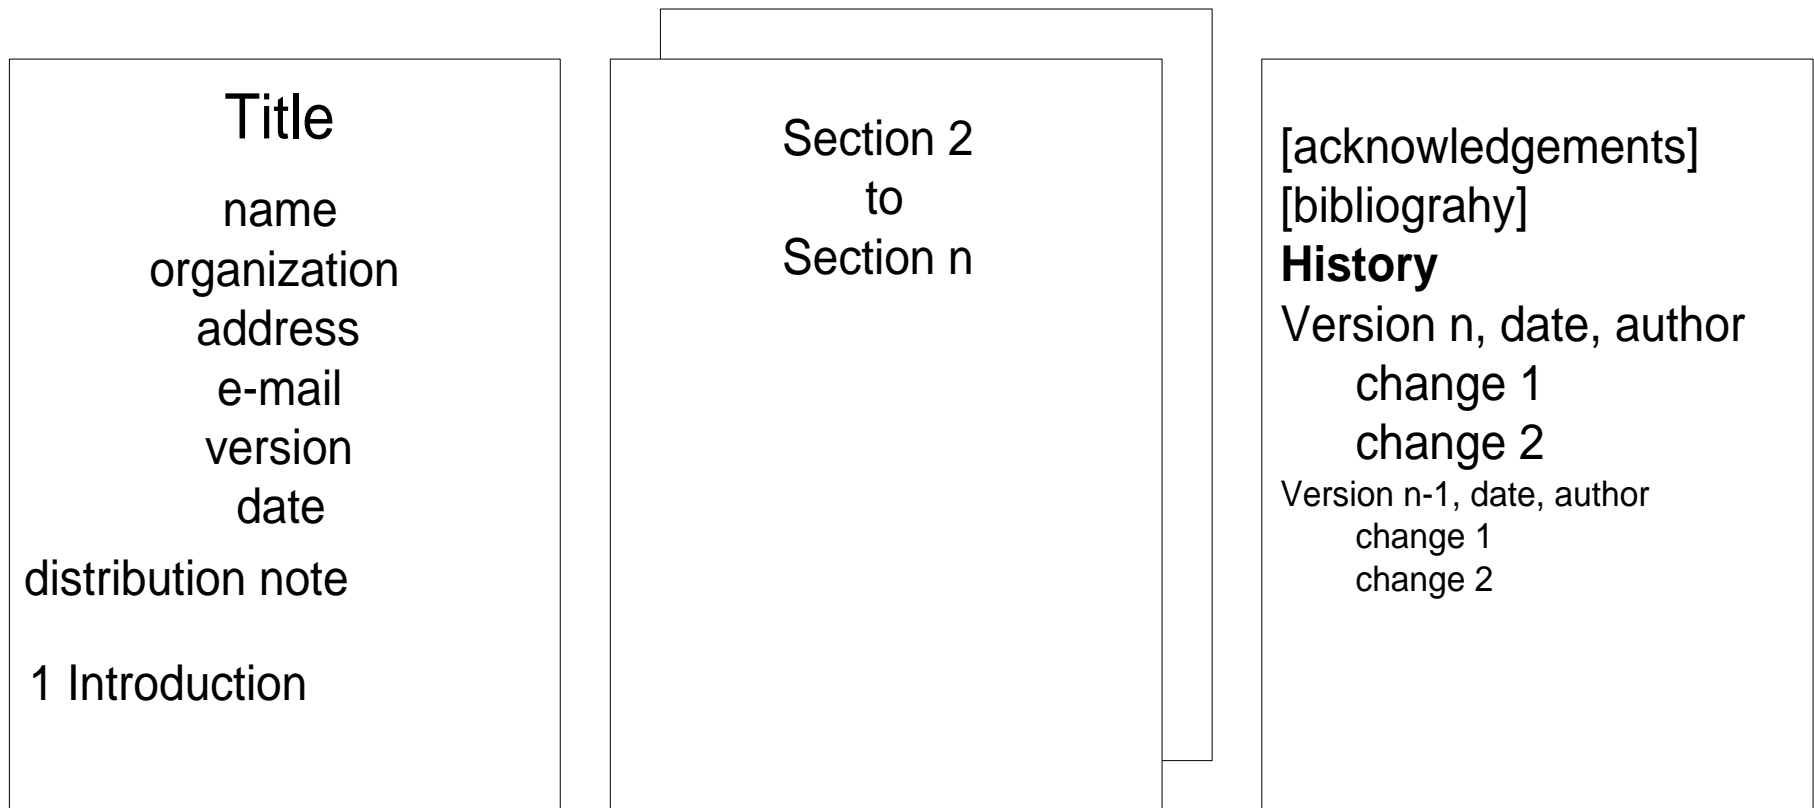

Future:

- Spell Checking (23)
- Keyword Generation to support web search engines (24)

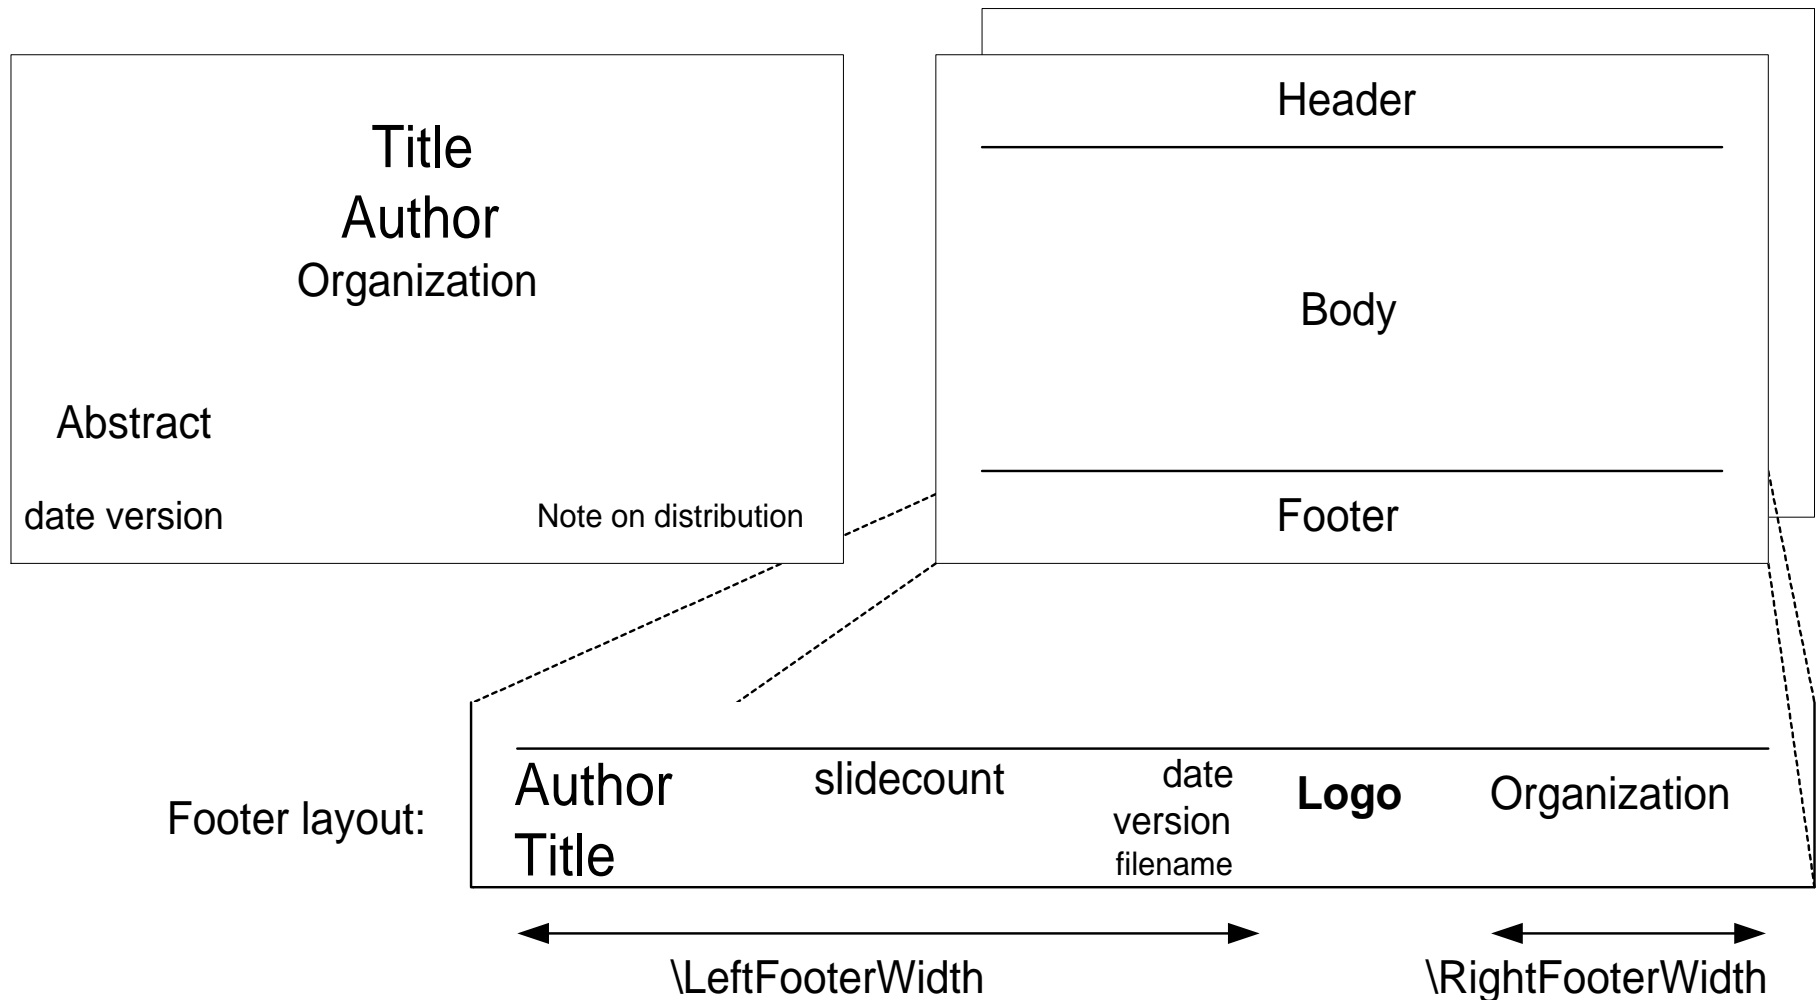

Structure of Source; Relation with Output

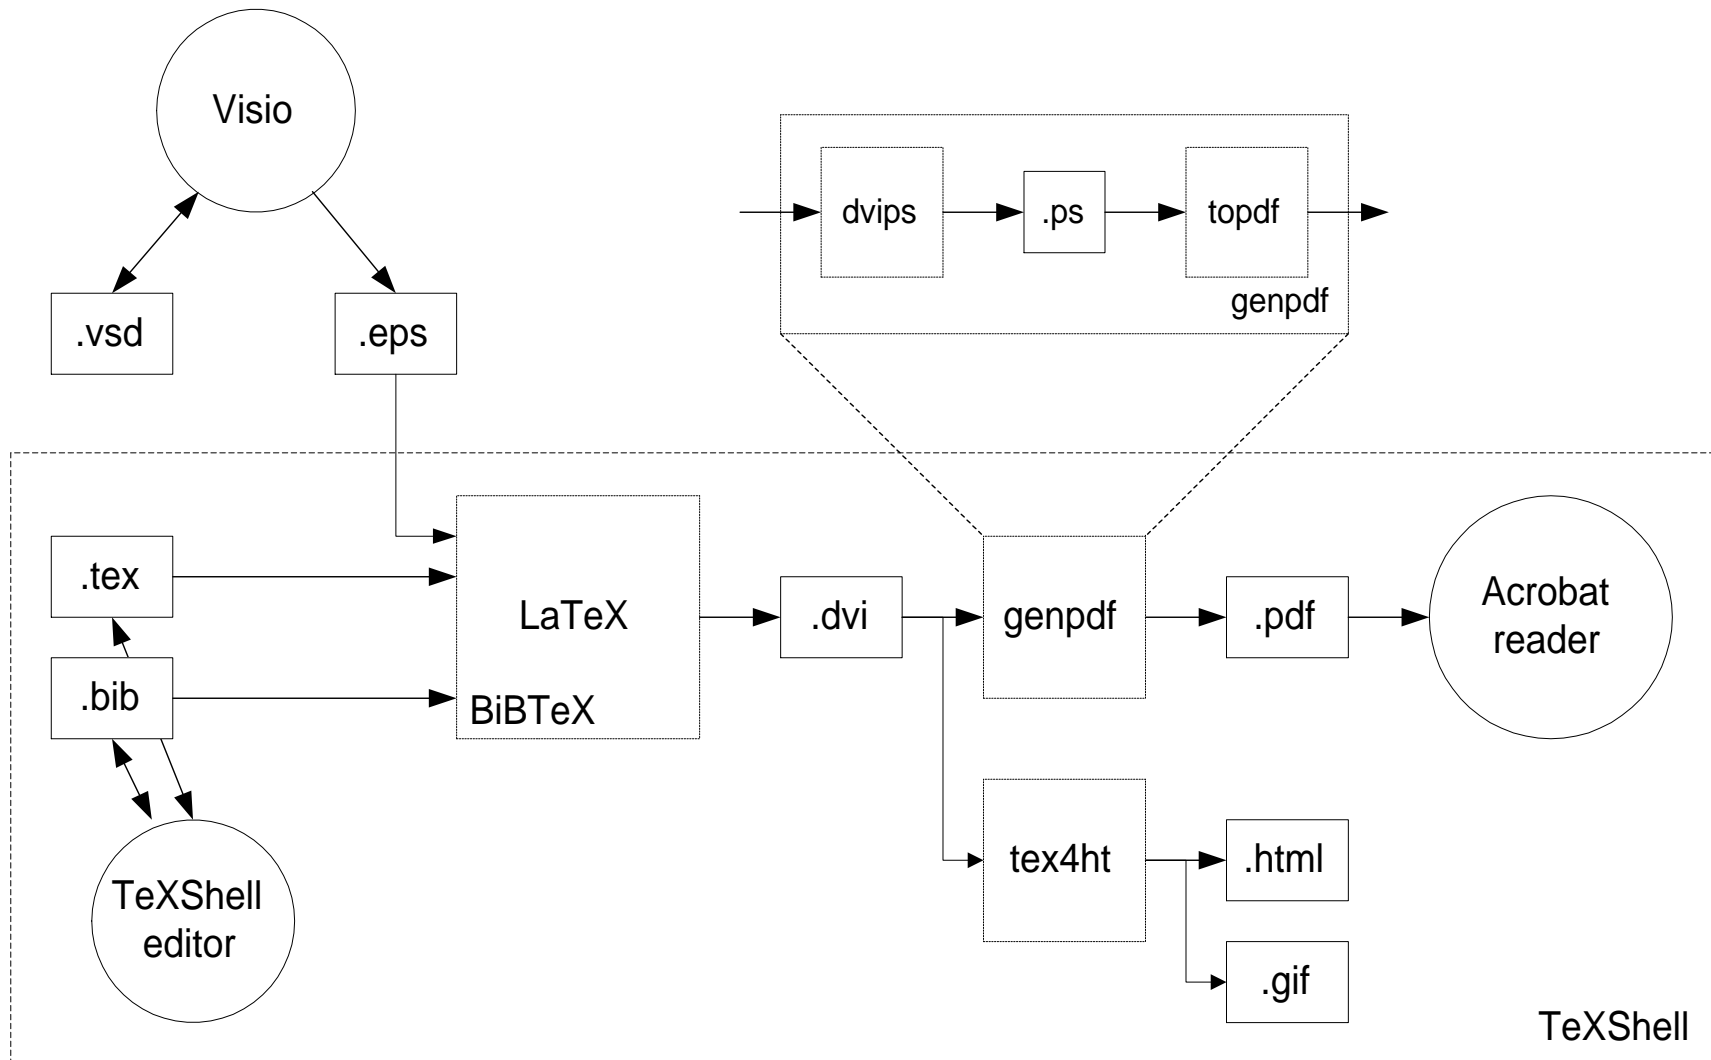

Typical Layout of an article on paper

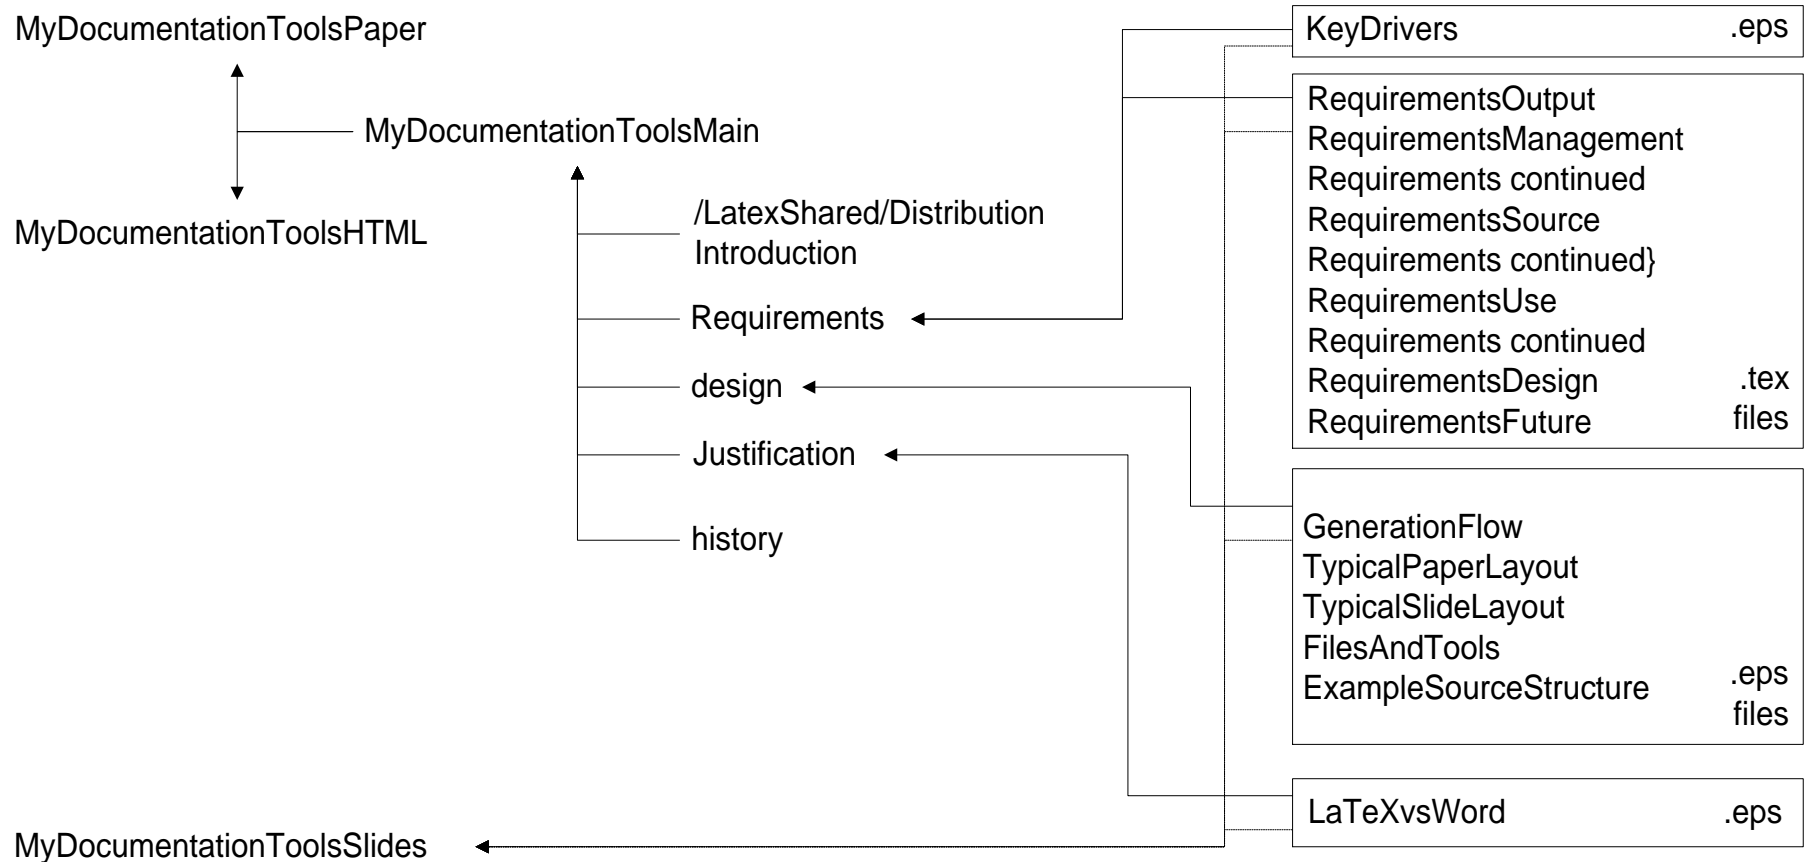

Typical layout of a presentation on slides

Filetypes and transformation from source to output

Example, the source structure of this presentation

Productivity of LaTeX vs Word/Powerpoint
