Abstract

The role of the architect in today's turbulent world is discussed. There is a need for systems that improve security, safety, and that provide threat analysis and prevention, and intelligence. These systems are build in an era full of technological opportunities; from biometrics to intelligent vision/analysis et cetera. However we are faced with many challenges: how to cope with huge amounts of information, how to cope with or how to prevent false positives and false negatives. At the same time system builders have to deal with complicating factors: human factor, many open systems in stead of a few closed systems, and the dynamics of the environment (politics, terrorists, nature, ...).

What is the role of the architect, how to cope with the challenges and complications, what methods and tools are available?

Distribution

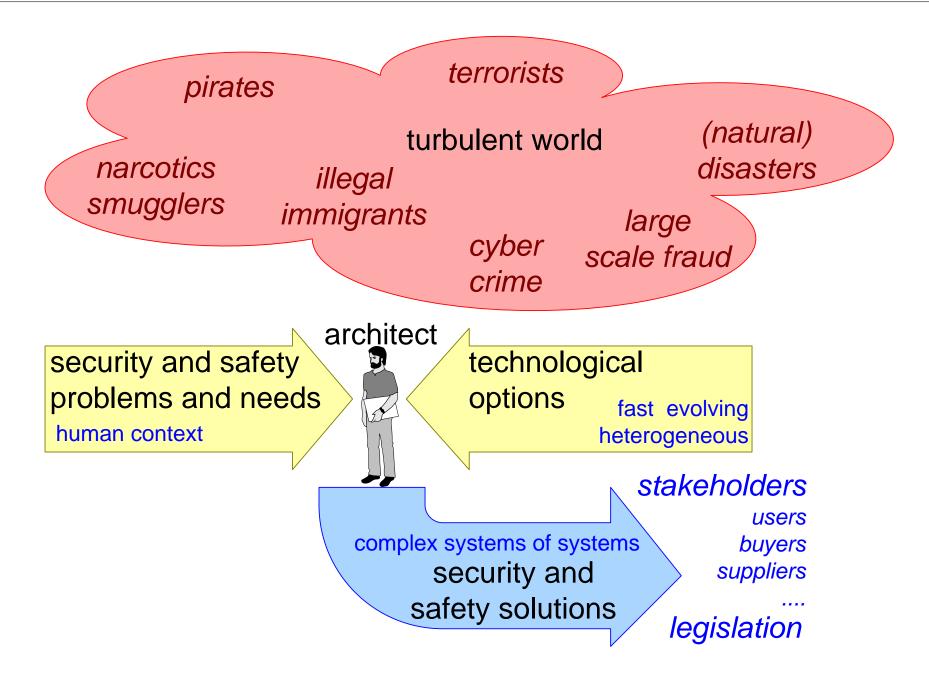

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

The Architect in a Turbulent World

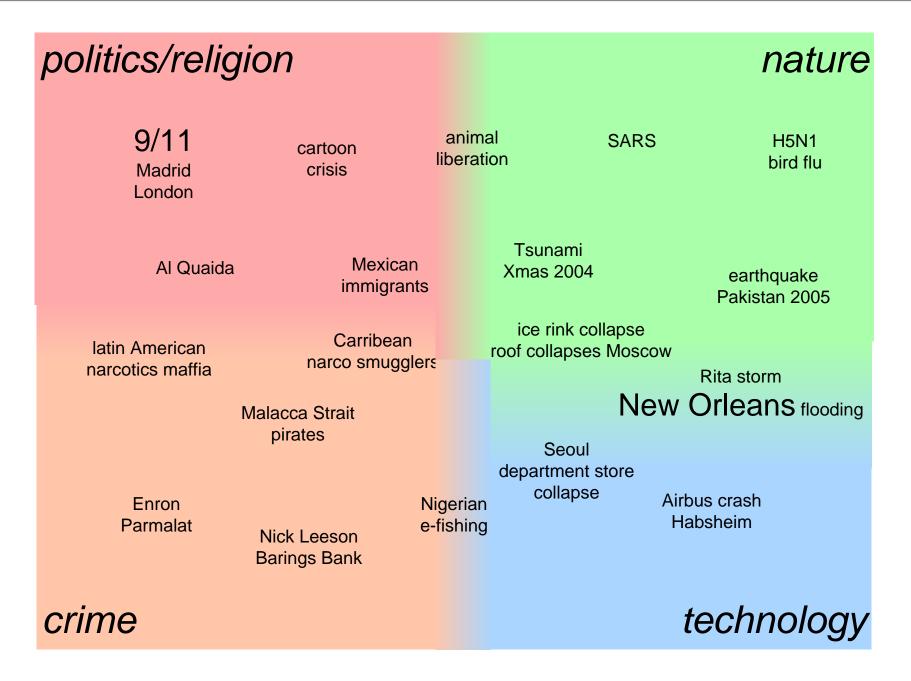

Structure of this Presentation

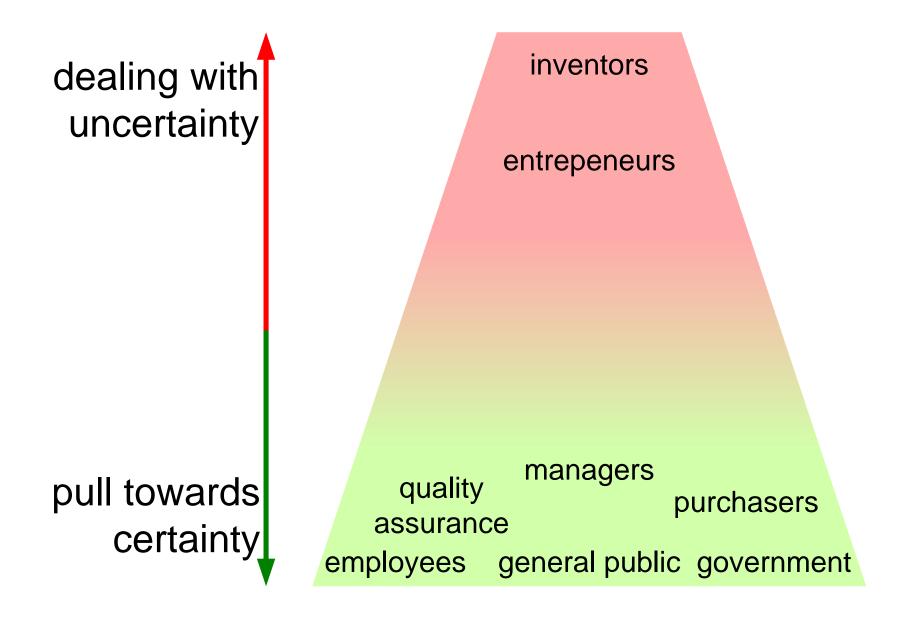

Exploring Turbulence

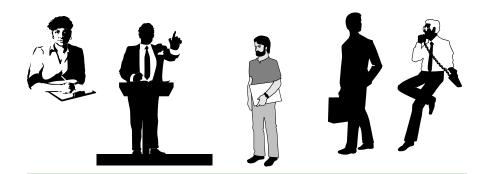

Sources of Turbulence: Mega Events

Most Stakeholders Strive for Certainty

Contradiction: Humans as Champions of Adaptability

Homo Sapiens thousands of years of adaptation

sea, desert, polar, mountain, dehydration, flood, fire, famine, war, plague, diseases

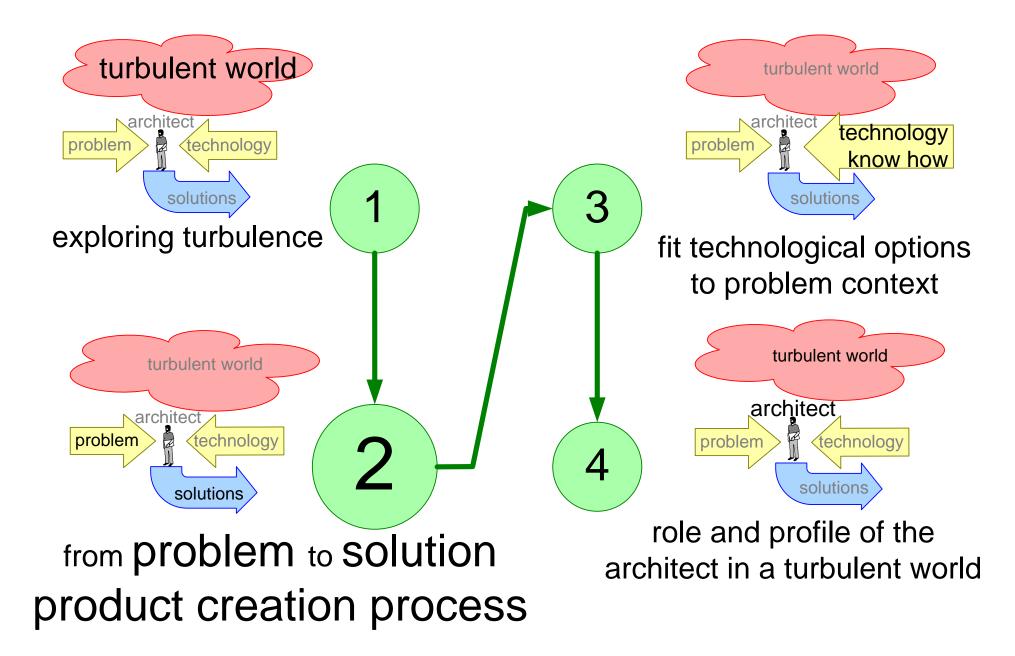

technological systems hundreds of years of dedication

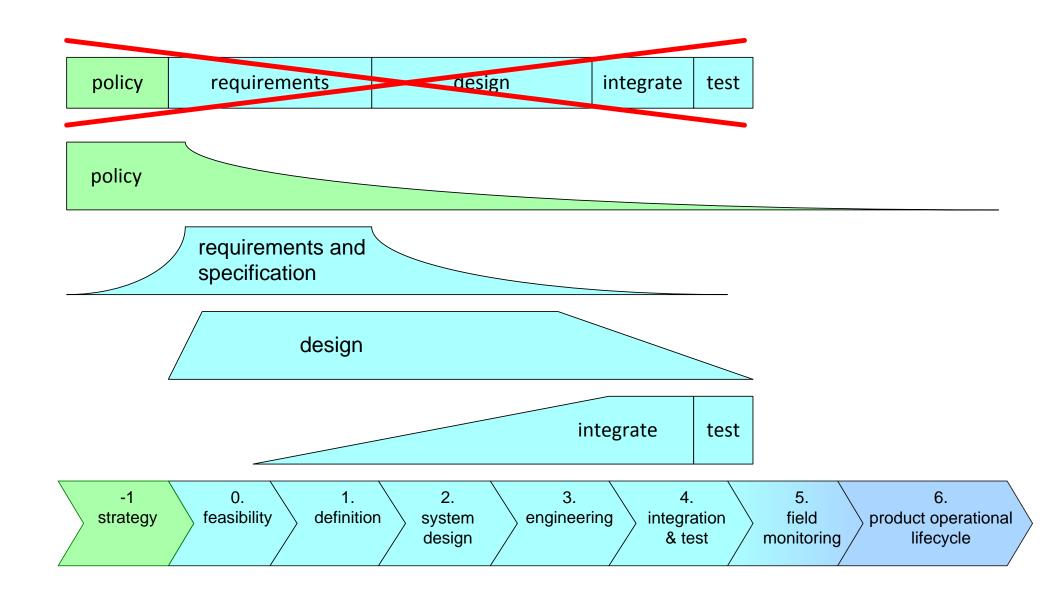

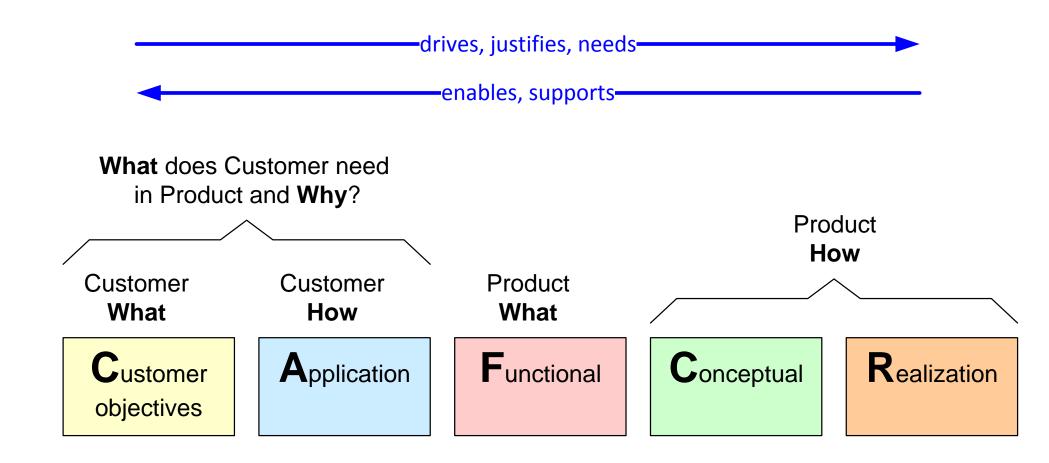

From Problem to Solution; Product Creation Process

Product Creation: Phasing of Process Steps

The "CAFCR" model

Security as example through all views

unworkable procedures

Connecting Problem Space and Solution Space

Example Questions

Customer objectives

Application

Functional

Conceptual

Realisation

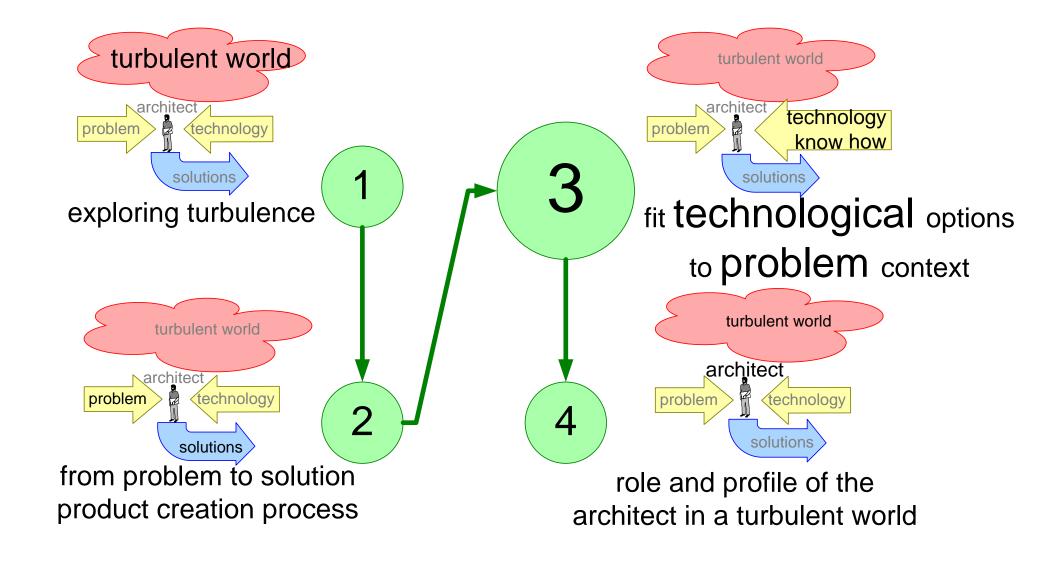

Will biometrics improve authentication? Is encryption guaranteeing information security?

What are the implementation related security hazards?

What are the process assumptions?

Does the technological solution fit in the human mindset?

Fit Technological Options to Problem Context

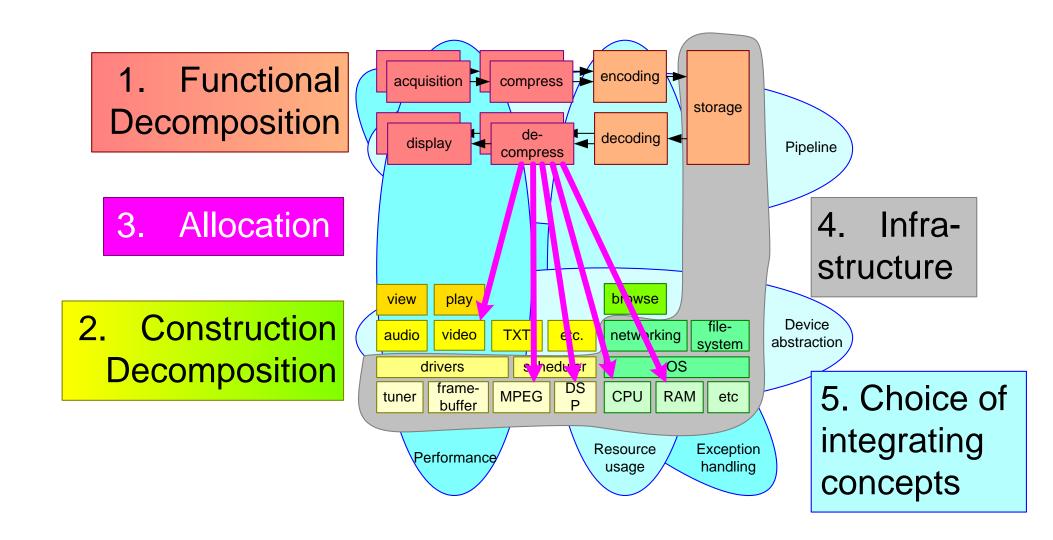

Understanding Describing Guiding How

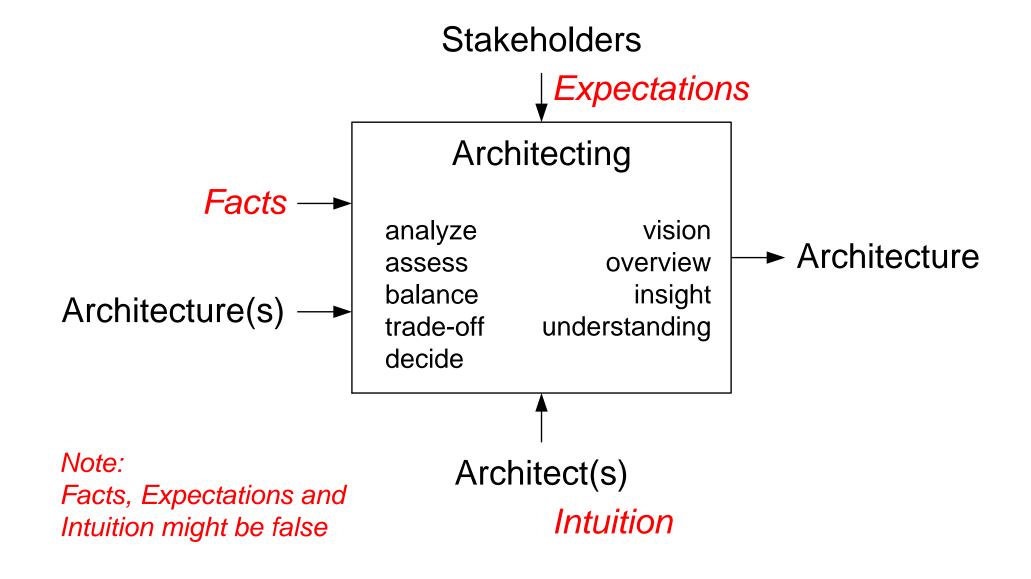

Do the right things

Do the things right

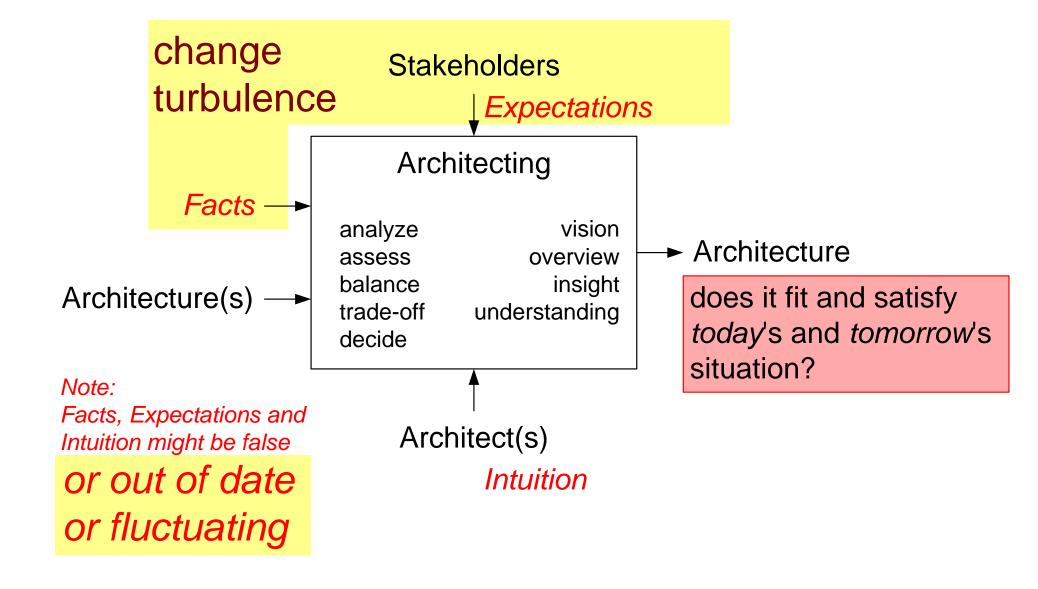

"Guiding How" by providing rules for:

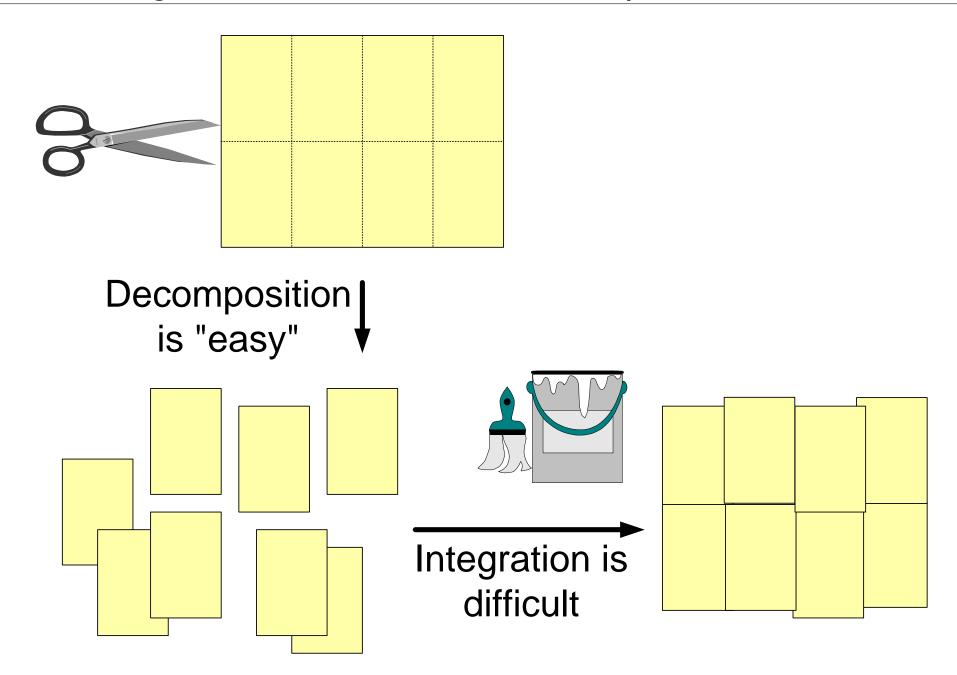

The Art of Architecting Anno 1990

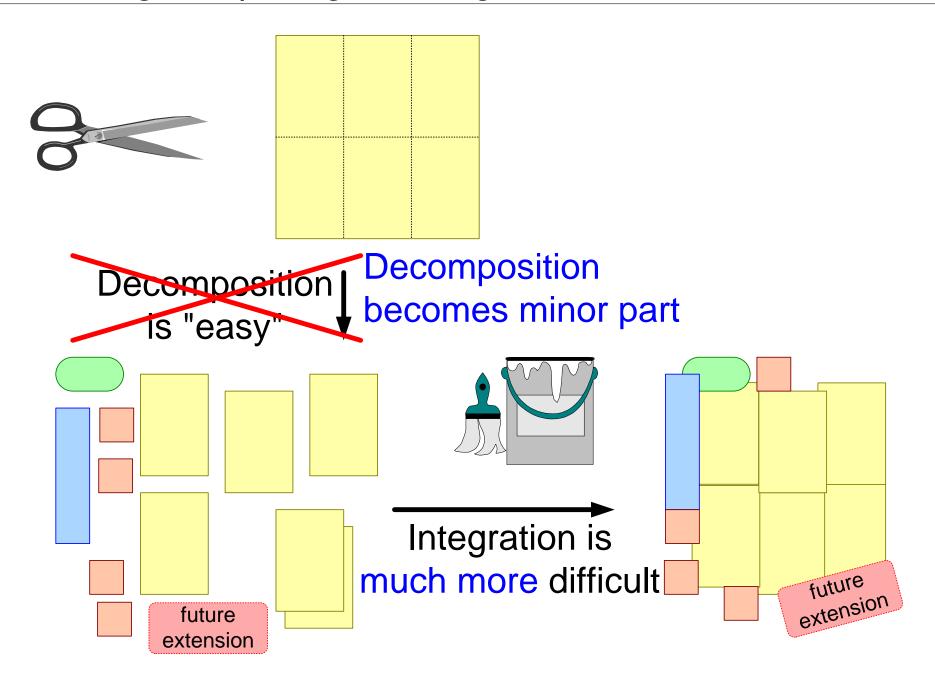

The Art of Architecting Anno 2006

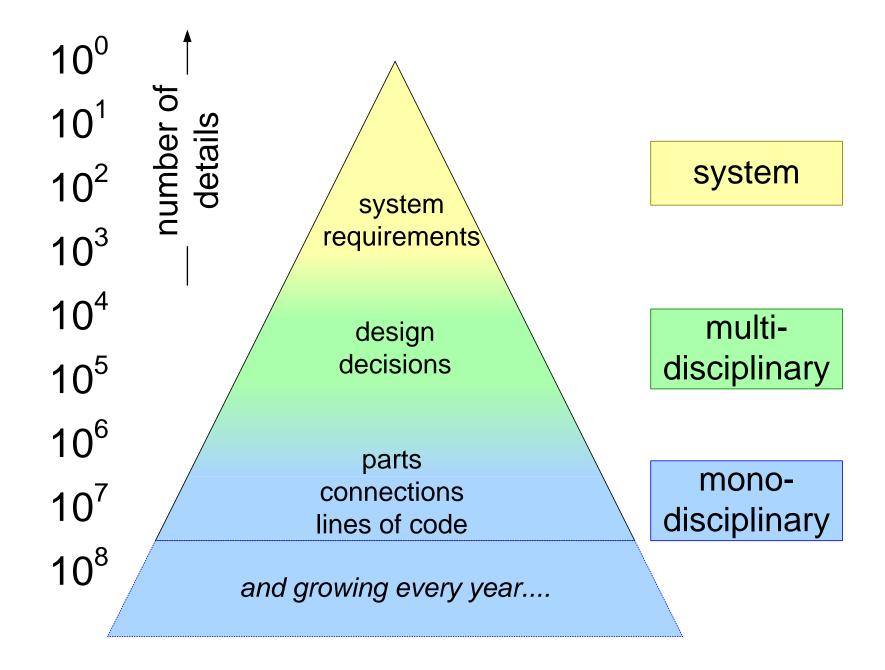

Architecting is much more than Decomposition

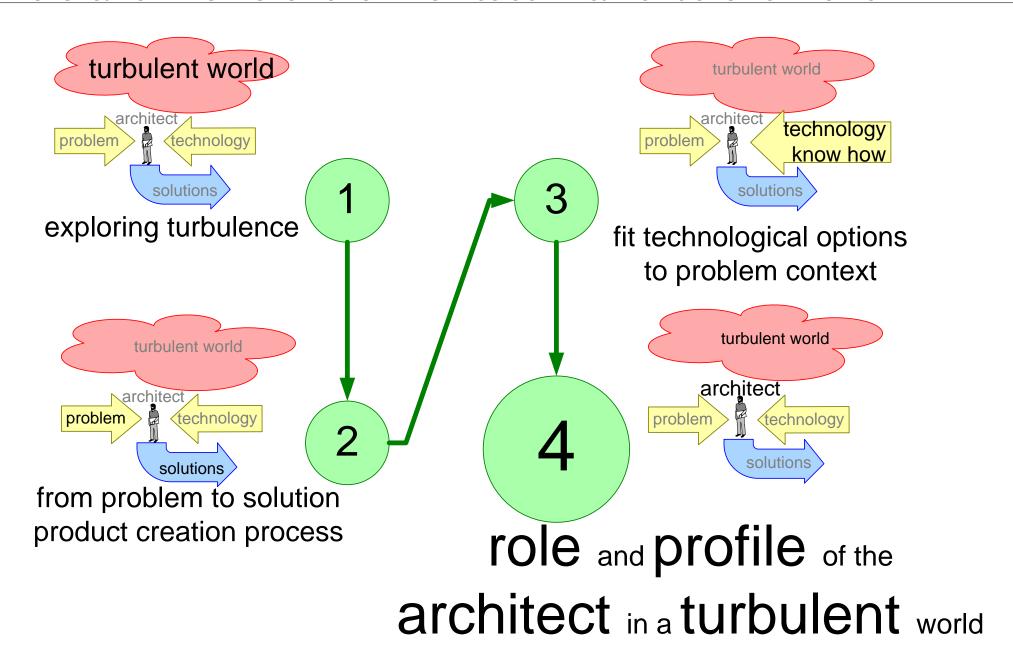

Architecting: Preparing for Integration

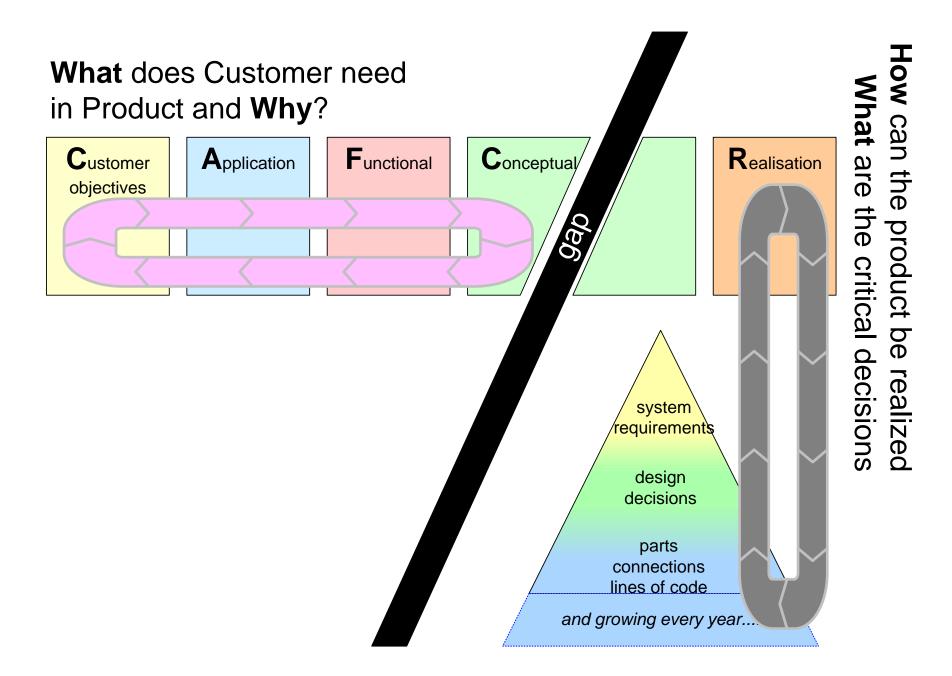

Technical Decisions Require Detailed Know How

Role and Profile of the Architect in a Turbulent World

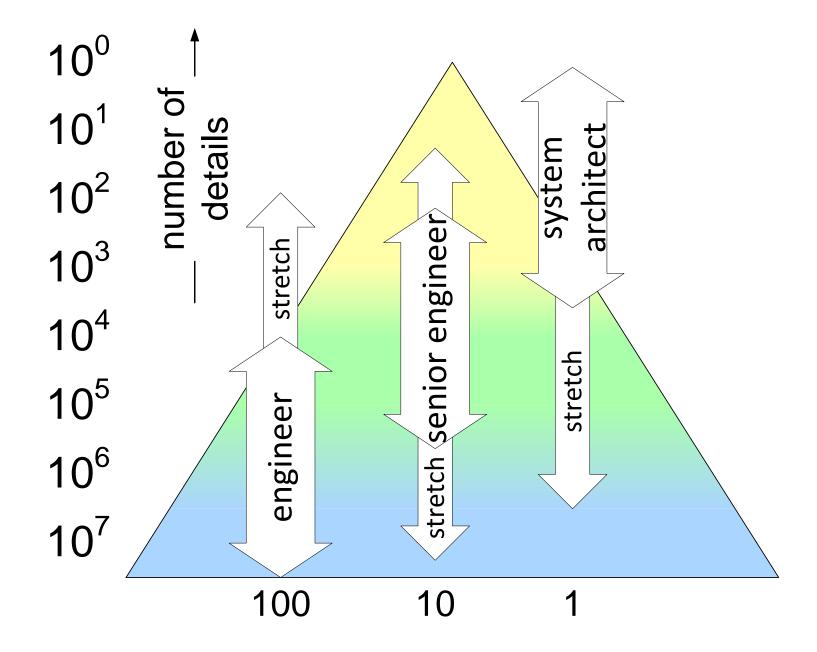

Organizational Problem: Disconnect

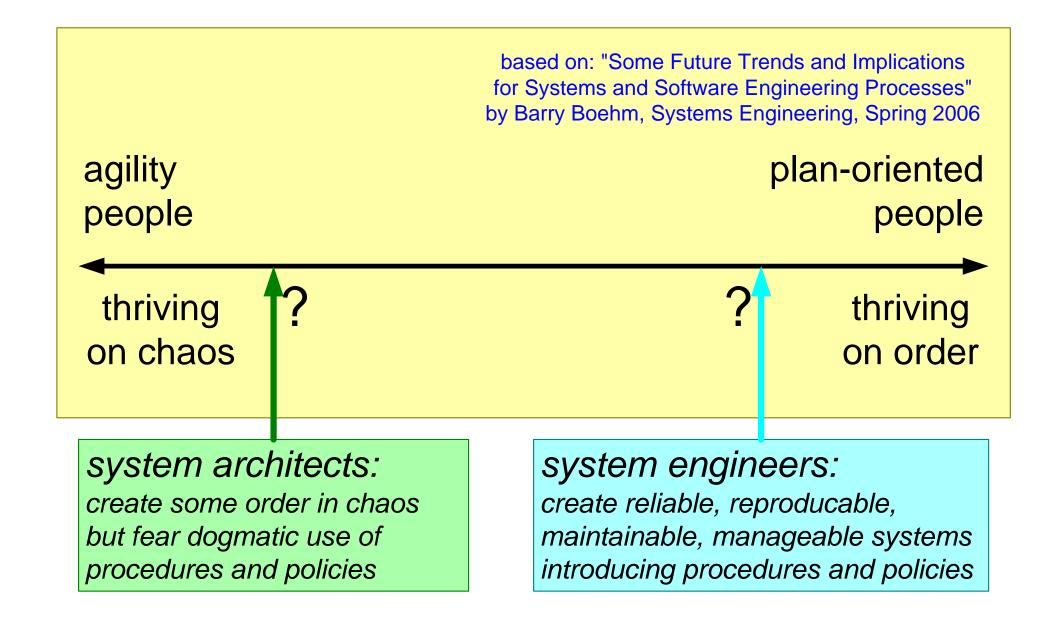

Architect: Connecting Problem and Technical Solution

What does Customer need **How** can the product be realized in Product and Why? What are the critical decisions Functional Customer **A**pplication Conceptual Realisation objectives 10⁰ 10¹ 10² 10³ 10⁴ number of details system requirements design 10⁵ decisions 10⁶ parts 10⁷ connections lines of code 10⁸ and growing every year...

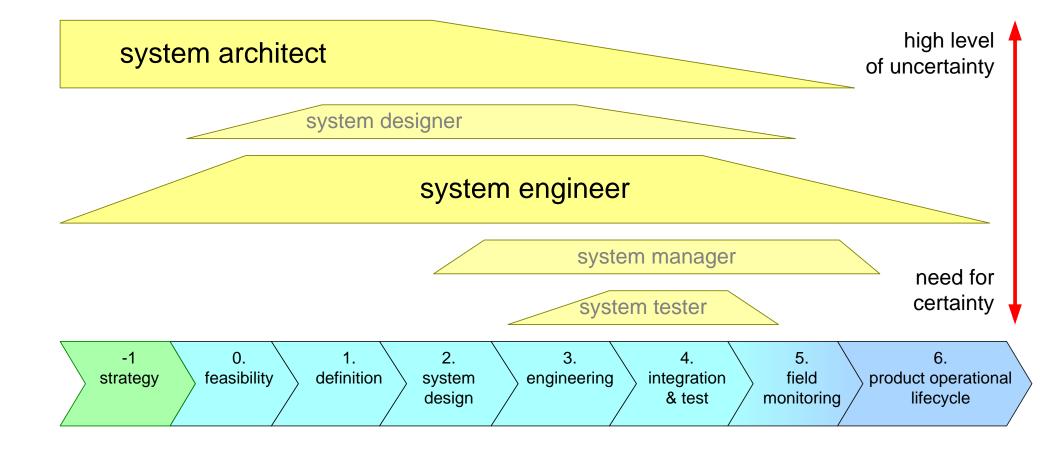

Major Bottleneck: Mental Dynamic Range

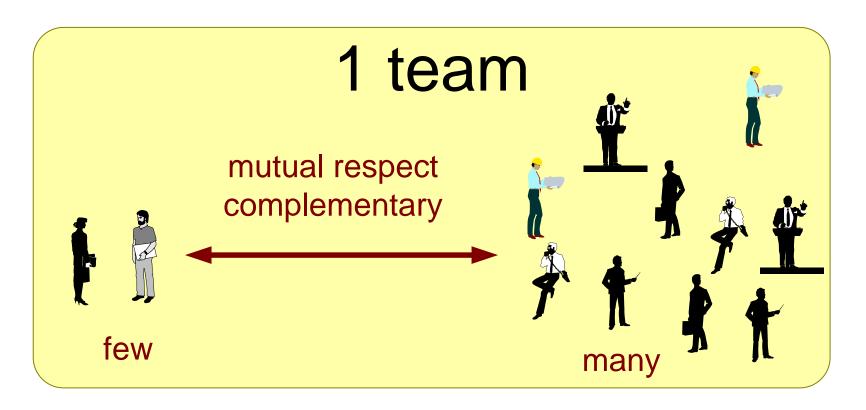

Opposing, but Complementary Skills and Cultures

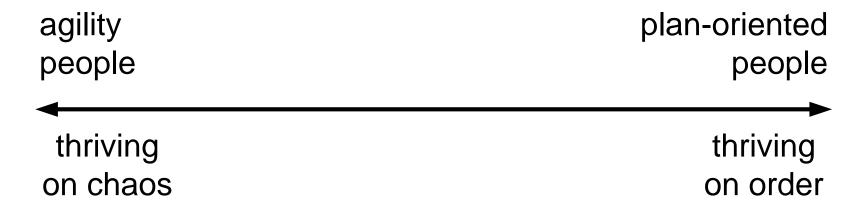

System Roles: Company Culture Dependent

Recommendation 1: Team Work

Recommendation 2: Symbiose via Workshops

workshop(s)
