## Abstract

This module addresses the role of software in complex systems

### Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

# The Role of Software in Systems

by *Gerrit Muller* USN-SE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

Software is a dominating factor in the development of complex systems. It plays a crucial role in the performance of the final product at the one hand, while it contributes significant to the development cost and elapsed time of development. This paper discusses the role of software in the broader system context. An improved understanding of the role of software enables the system architect, and the other stakeholders of the product creation process, to integrate the software development better. In this way hardware-software tradeoffs can be made, balancing performance, costs and risks.

### Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. # Relative Contribution of SW

# Mismatch between Role and Discipline

---

## *role of software*

integration technology

captures *application* functionality

defines lot of *system* behavior

determines how much of potential *system* performance is achieved

acts as director

mismatch!

## *focus of software discipline*

software technologies, such as:

programming languages

data bases

operating systems

component technologies

engineering practices

# Control Hierarchy along Technology axis

# Characterization of disciplines

# Quality Attributes annotated with SW relation

# Design Aspects related to SW

# SW Mechanisms

# Exercise Role of Software in a complex product

---

Describe the SW in a complex product, from different viewpoints for instance:

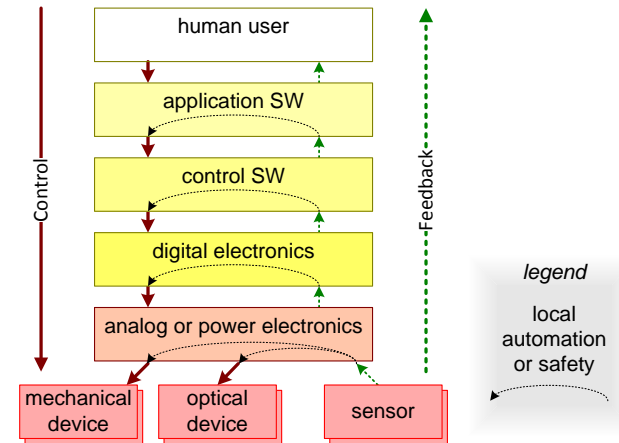

- Give an indication of the size/complexity
- Outline the SW architecture
- Identify the top 3 critical characteristics
- Identify potential improvements
- Process
- Development environment

# Software

## Role of Software

## Control Hierarchy

## Discipline Characteristics
