

# Lecture Requirements Engineering

by *Gerrit Muller*     University of South-Eastern Norway-NISE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

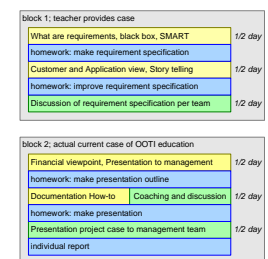

## Abstract

This article describes the Requirements Engineering session part of the Software Engineering block in the OOTI curriculum of the Technical University Eindhoven. The focus of this course is on capturing and managing requirements. The notion of key drivers and story telling will be introduced as a means to capture and manage. During the course an exercise is used based on video distribution via satellite. The students have to elicit the requirements for the required systems, working in teams of 4 students. Every student writes an individual report about the exercise.

## Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

March 27, 2021  
status: finished  
version: 1.1

# Program

---

time	subject
Session 1	What are requirements, black box, SMART
Session 2	Customer and Application view, Story telling
Session 3	Discussion of requirement specification per team
Session 4	Financial viewpoint, Presentation to management
Session 5	Documentation How-to, Coaching and discussion session
Session 6	Presentation of project case to management team

# Schedule

block 1; teacher provides case

What are requirements, black box, SMART	1/2 day
homework: make requirement specification	
Customer and Application view, Story telling	1/2 day
homework: improve requirement specification	
Discussion of requirement specification per team	1/2 day

block 2; actual current case of OOTI education

Financial viewpoint, Presentation to management		1/2 day
homework: make presentation outline		
Documentation How-to	Coaching and discussion	1/2 day
homework: make presentation		
Presentation project case to management team		1/2 day
individual report		

# Case Instructions

---

1. Block 1 session 1: Make an initial requirements specification
2. Block 1 session 2: Improve and complete requirements specification
3. Block 2 session 4: Make an outline of a presentation of maximum 10 minutes, target audience: management team of your company
4. Block 2 session 5: Prepare and exercise presentation
5. Block 2 session 6: Write an individual report reflecting on: requirement specification, management presentation, lessons learned and how to do it next time.

# Case: Recommended Steps

---

1. Make a black box view of the system
2. Make some initial drafts and designs to explore the problem.
3. Make a story which helps to understand the products, make sure to use the criteria for a story.
4. Look from all stakeholder points of view towards the problem and identify what they need and what they expect.
5. Analyze the information obtained so far and extract the underlying requirements.
6. Abstract the key drivers behind the requirements.
7. Make a top-down description of the requirements.

# Case: Questions for Individual Report

---

- What are the most important lessons you learned from these exercise (requirement specification, management presentation)?
- Which roles did the members of the group play during the exercise?
- How would you approach such a problem the next time?
- Which stakeholders understand your group presentation? Are they happy with the presentation?

# Submission of Homework

---

## Homework instructions

specification minimum 4 hours work/person, maximum 8 hours

maximum 6 A4 pages

presentation minimum 2 days work/ person, maximum 5 days

# Fundamentals of Requirements Engineering

by *Gerrit Muller* USN-SE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

Requirements engineering is one of the systems engineering pillars. In this document we discuss the fundamentals of systems engineering, such as the transformation of needs into specification, the need to prescribe *what* rather than *how*, and the requirements when writing requirements.

### Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. # Short introduction to basic “CAFCR” model

by *Gerrit Muller*     University of South-Eastern Norway-NISE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

The basic “CAFCR” reference model is described, which is used to describe a system in relation to its context. The main stakeholder in the context is the customer. The question “Who is the customer?” is addressed.

## Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

status: draft

version: 0.4

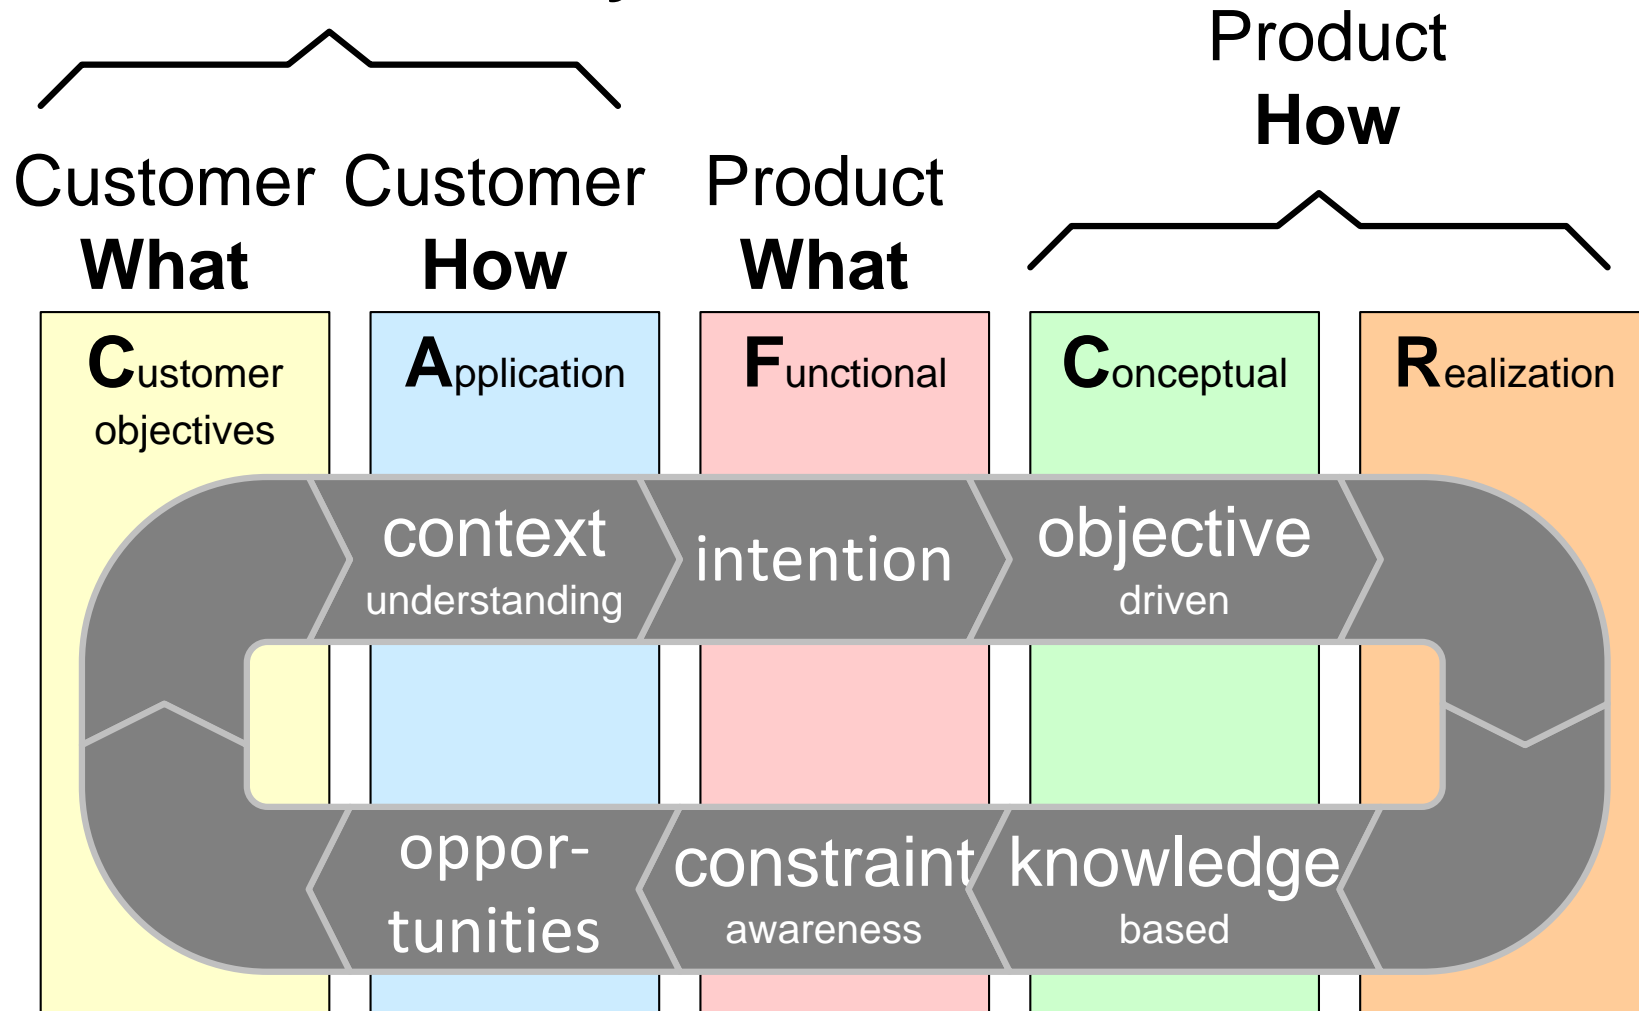

# The “CAFCR” model

**What** does Customer need  
in Product and **Why?**

# CAFCR can be applied recursively

# Market segmentation

---

segmentation axis	examples
geographical	USA, UK, Germany, Japan, China
business model	profit, non profit
economics	high end versus cost constrained
consumers	youth, elderly
outlet	retailer, provider, OEM, consumer direct

# Example of a small buying organization

CEO: Chief Executive Officer  
CFO: Chief Financial Officer  
CIO: Chief Information Officer  
CMO: Chief Marketing Officer  
CTO: Chief Technology Officer

# CAFCR+ model; Life Cycle View

---

# Key Drivers How To

by *Gerrit Muller*      University of South-Eastern Norway-NISE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

The notion of "business key drivers" is introduced and a method is described to link these key drivers to the product specification.

## Distribution

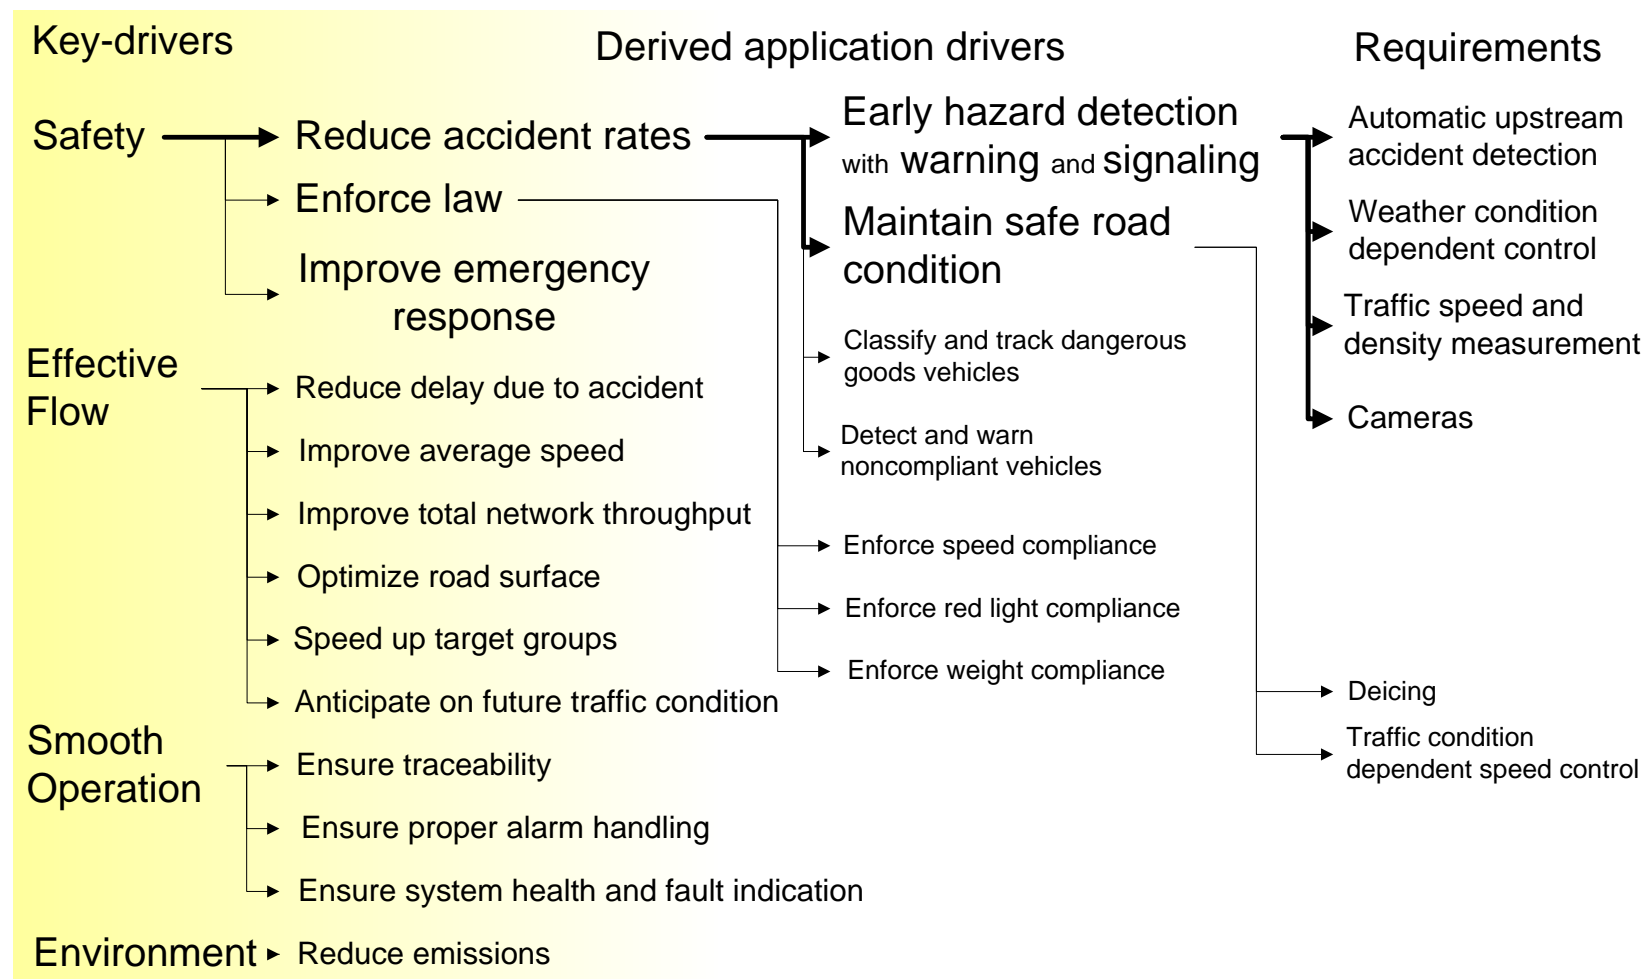

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

March 27, 2021  
status: draft  
version: 0.2

Note: the graph is only partially elaborated for application drivers and requirements

# Example Motorway Management Analysis

*Note: the graph is only partially elaborated for application drivers and requirements*

# Method to create Key Driver Graph

---

- |  |  |
|--|--|
| • Define the scope specific.   | in terms of stakeholder or market segments   |
| • Acquire and analyze facts  | extract facts from the product specification<br>and ask why questions about the specification of existing products.  |
| • Build a graph of relations between drivers and requirements<br>by means of brainstorming and discussions | where requirements<br>may have multiple drivers  |
| • Obtain feedback  | discuss with customers, observe their reactions  |
| • Iterate many times   | increased understanding often triggers the move of issues<br>from driver to requirement or vice versa and rephrasing |

# Recommendation for the Definition of Key Drivers

---

- |  |   |
|--|---|
| • Limit the number of key-drivers  | minimal 3, maximal 6  |
| • Don't leave out the obvious key-drivers  | for instance the well-known main function of the product  |
| • Use short names, recognized by the customer.                                     |   |
| • Use market-/customer- specific names, no generic names                           | for instance replace “ease of use” by “minimal number of actions for experienced users”, or “efficiency” by “integral cost per patient” |
| • Do not worry about the exact boundary between Customer Objective and Application | create clear goal means relations   |

# Transformation of Key Drivers into Requirements

# Requirements Elicitation and Selection

by *Gerrit Muller*     University of South-Eastern Norway-NISE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

An elicitation method for needs is described using many different viewpoints. A selection process with a coarse and a fine selection is described to reduce the specification to an acceptable and feasible subset.

## Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

# Complementary Viewpoints to Capture Requirements

# Requirement Selection Process

# Simple Qualification Method

# Examples of Quantifiable Aspects

---

- Value for the customer
- (dis)satisfaction level for the customer
- Selling value (How much is the customer willing to pay?)
- Level of differentiation w.r.t. the competition
- Impact on the market share
- Impact on the profit margin

Use relative scale, e.g. 1..5 1=low value, 5 -high value

Ask several knowledgeable people to score

Discussion provides insight (don't fall in spreadsheet trap)

# Exercise Requirements Capturing

---

- Determine the key drivers for one particular product family.
- Translate these drivers into application drivers and derive from them the requirements.

# Needs and Requirements

## Needs, Specification, Requirements

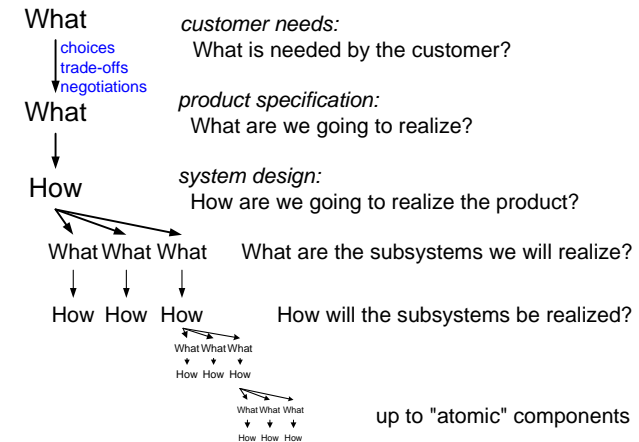

Requirements describing the needs of the customer:  
**Customer Needs**

Requirements describing the characteristics of the final resulting system (product): **System (Product) Specification**

The **requirements management process** recursively applies this definition for every level of decomposition.

Requirements describing the needs of the company itself over the life cycle: **Life Cycle Needs**

## Flow of Requirements

## Requirements for Requirements

Specific  
Unambiguous  
Verifiable  
Quantifiable  
Measurable  
Complete  
Traceable

## Enable Human Use

Accessible  
Understandable  
Low threshold

# CAFCR, Customer Key Driver Graph

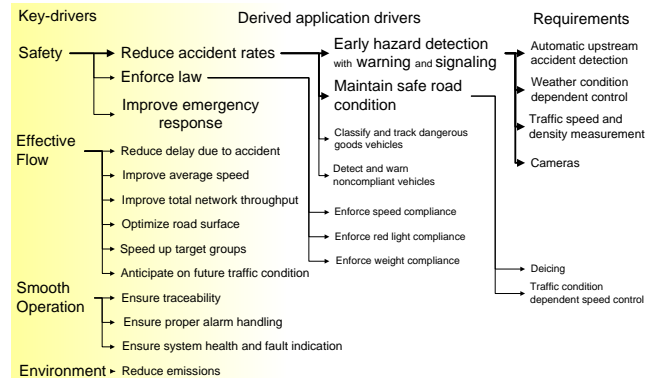

## CAFCR+ Model

## Iterate over Views

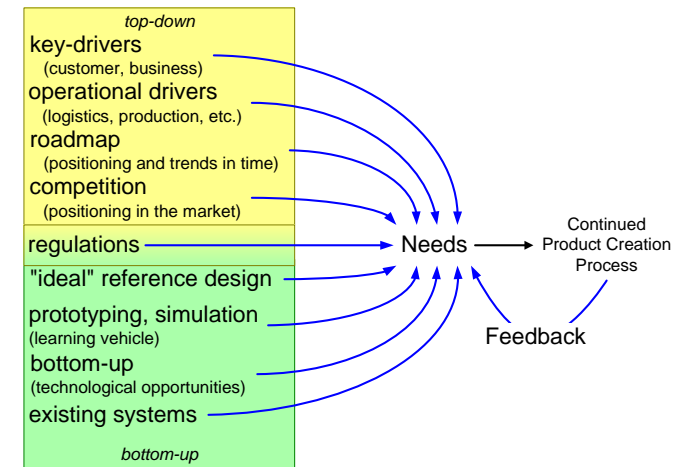

## Example Key Driver Graph

Note: the graph is only partially elaborated for application drivers and requirements

## Complementary Viewpoints

# Story How To

by *Gerrit Muller*      University of South-Eastern Norway-NISE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

A story is an easily accessible story or narrative to make an application live. A good story is highly specific and articulated entirely in the problem domain: the native world of the users. An important function of a story is to enable specific (*quantified, relevant, explicit*) discussions.

## Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

March 27, 2021  
status: concept  
version: 1.2

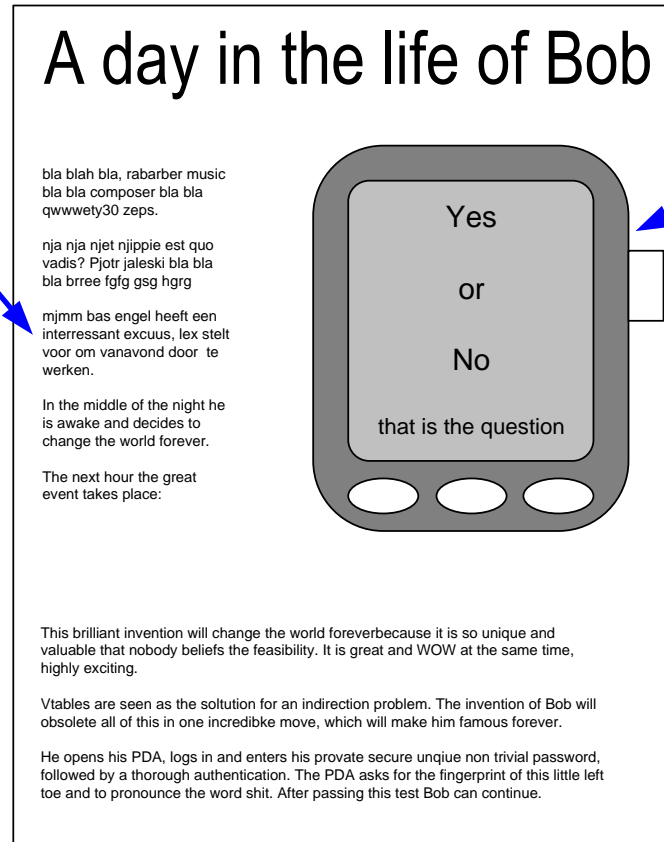

# From story to design

# Example story layout

ca. half a page of  
plain English text

draft or sketch of  
some essential  
appliance

- purpose What do you need to know for specification and design?
- scope “umbrella” or specific event?
- viewpoint, stakeholders Define your stakeholder and viewpoint  
f.i. user, maintainer, installer
- visualization Sketches or cartoon  
Helps to share and communicate ideas
- size (max 1 A4) Can be read or told in few minutes
- recursive decomposition, refinement

# Criteria for a good story

**C**ustomer  
objectives

**A**pplication

- accessible, understandable

"Do you see it in front of you?"

**C**ustomer  
objectives

**A**pplication

- valuable, appealing

attractive, important

"Are customers queuing up for this?"

**C**onceptual

**R**ealization

- critical, challenging

"What is difficult in the realization?"

"What do you learn w.r.t. the design?"

**A**pplication

- frequent, no exceptional niche

"Does it add significantly to the bottom line?"

**A**pplication

**F**unctional

- specific

names, ages, amounts, durations, titles, ...

# Example of a story

Betty is a 70-year-old woman who lives in Eindhoven. Three years ago her husband passed away and since then she lives in a home for the elderly. Her 2 children, Angela and Robert, come and visit her every weekend, often with Betty's grandchildren Ashley and Christopher. As so many women of her age, Betty is reluctant to touch anything that has a technical appearance. She knows how to operate her television, but a VCR or even a DVD player is way to complex.

When Betty turned 60, she stopped working in a sewing studio. Her work in this noisy environment made her hard-of-hearing with a hearing-loss of 70dB around 2kHz. The rest of the frequency spectrum shows a loss of about 45dB. This is why she had problems understanding her grandchildren and why her children urged her to apply for hearing aids two years ago. Her technophobia (and her first hints of arthritis) inhibit her to change her hearing aids' batteries. Fortunately her children can do this every weekend.

This Wednesday Betty visits the weekly Bingo afternoon in the meetingplace of the old-folk's home. It's summer now and the tables are outside. With all those people there it's a lot of chatter and babble. Two years ago Betty would never go to the bingo: "I cannot hear a thing when everyone babbles and clatters with the coffee cups. How can I hear the winning numbers?!". Now that she has her new digital hearing instruments, even in the bingo cacophony, she can understand everyone she looks at. Her social life has improved a lot and she even won the bingo a few times.

That same night, together with her friend Janet, she attends Mozart's opera The Magic Flute. Two years earlier this would have been one big low rumbling mess, but now she even hears the sparkling high piccolos. Her other friend Carol never joins their visits to the theaters. Carol also has hearing aids, however hers only "work well" in normal conversations. "When I hear music it's as if a butcher's knife cuts through my head. It's way too sharp!". So Carol prefers to take her hearing aids out, missing most of the fun. Betty is so happy that her hearing instruments simply know where they are and adapt to their environment.

Embedded Systems Institute  
Eindhoven

# Value and Challenges in this story

Value proposition in this story:

quality of life:

active participation in different social settings

usability for nontechnical elderly people:

"intelligent" system is simple to use

loading of batteries

Challenges in this story:

Intelligent hearing instrument

Battery life — at least 1 week

No buttons or other fancy user interface on the hearing instrument, other than a robust On/Off method

The user does not want a technical device but a solution for a problem

Instrument can be adapted to the hearing loss of the user

Directional sensitivity (to prevent the so-called cocktail party effect)

Recognition of sound environments and automatic adaptation (adaptive filtering)

# Simplistic Financial Computations for System Architects.

by *Gerrit Muller* USN-SE

e-mail: gaudisite@gmail.com

www.gaudisite.nl

## Abstract

This document explains how simple financial estimates can be made by system architects. These simplistic estimates are useful for an architect to perform sanity checks on proposals and to obtain understanding of the financial impact of proposals. Note that architects will never have full fledged financial controller know how and skills. These estimates are zero order models, but real business decisions will have to be founded on more substantial financial proposals.

# Stacking Multiple Developments

# Fashionable financial yardsticks

---

Return On Investments (ROI)

Net Present Value

Return On Net Assets (RONA) leasing reduces assets, improves RONA

turnover / fte outsourcing reduces headcount, improves this ratio

market ranking (share, growth) "only numbers 1, 2 and 3 will be profitable"

R&D investment / sales in high tech segments 10% or more

cash-flow fast growing companies combine profits with negative cash-flow,  
risk of bankruptcy

# How to present architecture issues to higher management

by *Gerrit Muller* USN-SE

e-mail: [gaudisite@gmail.com](mailto:gaudisite@gmail.com)

[www.gaudisite.nl](http://www.gaudisite.nl)

## Abstract

Architects struggle with their visibility at higher management echelons. The introvert nature of architects is a severe handicap. Participation of architects in management teams is important for balanced technical sound decisions and strategy. Improved managerial communication skills of architects are required. This article describes how to give a more effective presentation to higher management teams. Subjects discussed are the preparation, content and form, do and don't advise.

## Distribution

# Requirements for the Entire Documentation Structure

---

Accessibility for the readers

Low threshold for the readers

Low threshold for the authors

Completeness

Consistency

Maintainability

Scalability

Evolvability

Process to ensure the quality of the information

Convenient **easy**  
**fast**  
viewing  
printing  
searching

# Requirements per Document

---

High cohesion (within the unit)

Low coupling (outside of the unit)

Accessibility for the readers

Low threshold for the reader

Low threshold for the author

Manageable steps to create, review, and change

Clear responsibilities

Clear position and relation with the context

Well-defined status of the information

Timely availability

Ease of reading, “juiciness”

High signal-to-noise ratio: information should not be hidden in a sea of words.

Understandability

Reachability in different ways, e.g., by hierarchical or full search

Reachability in a limited number of steps

single author

limited amount of reviewers

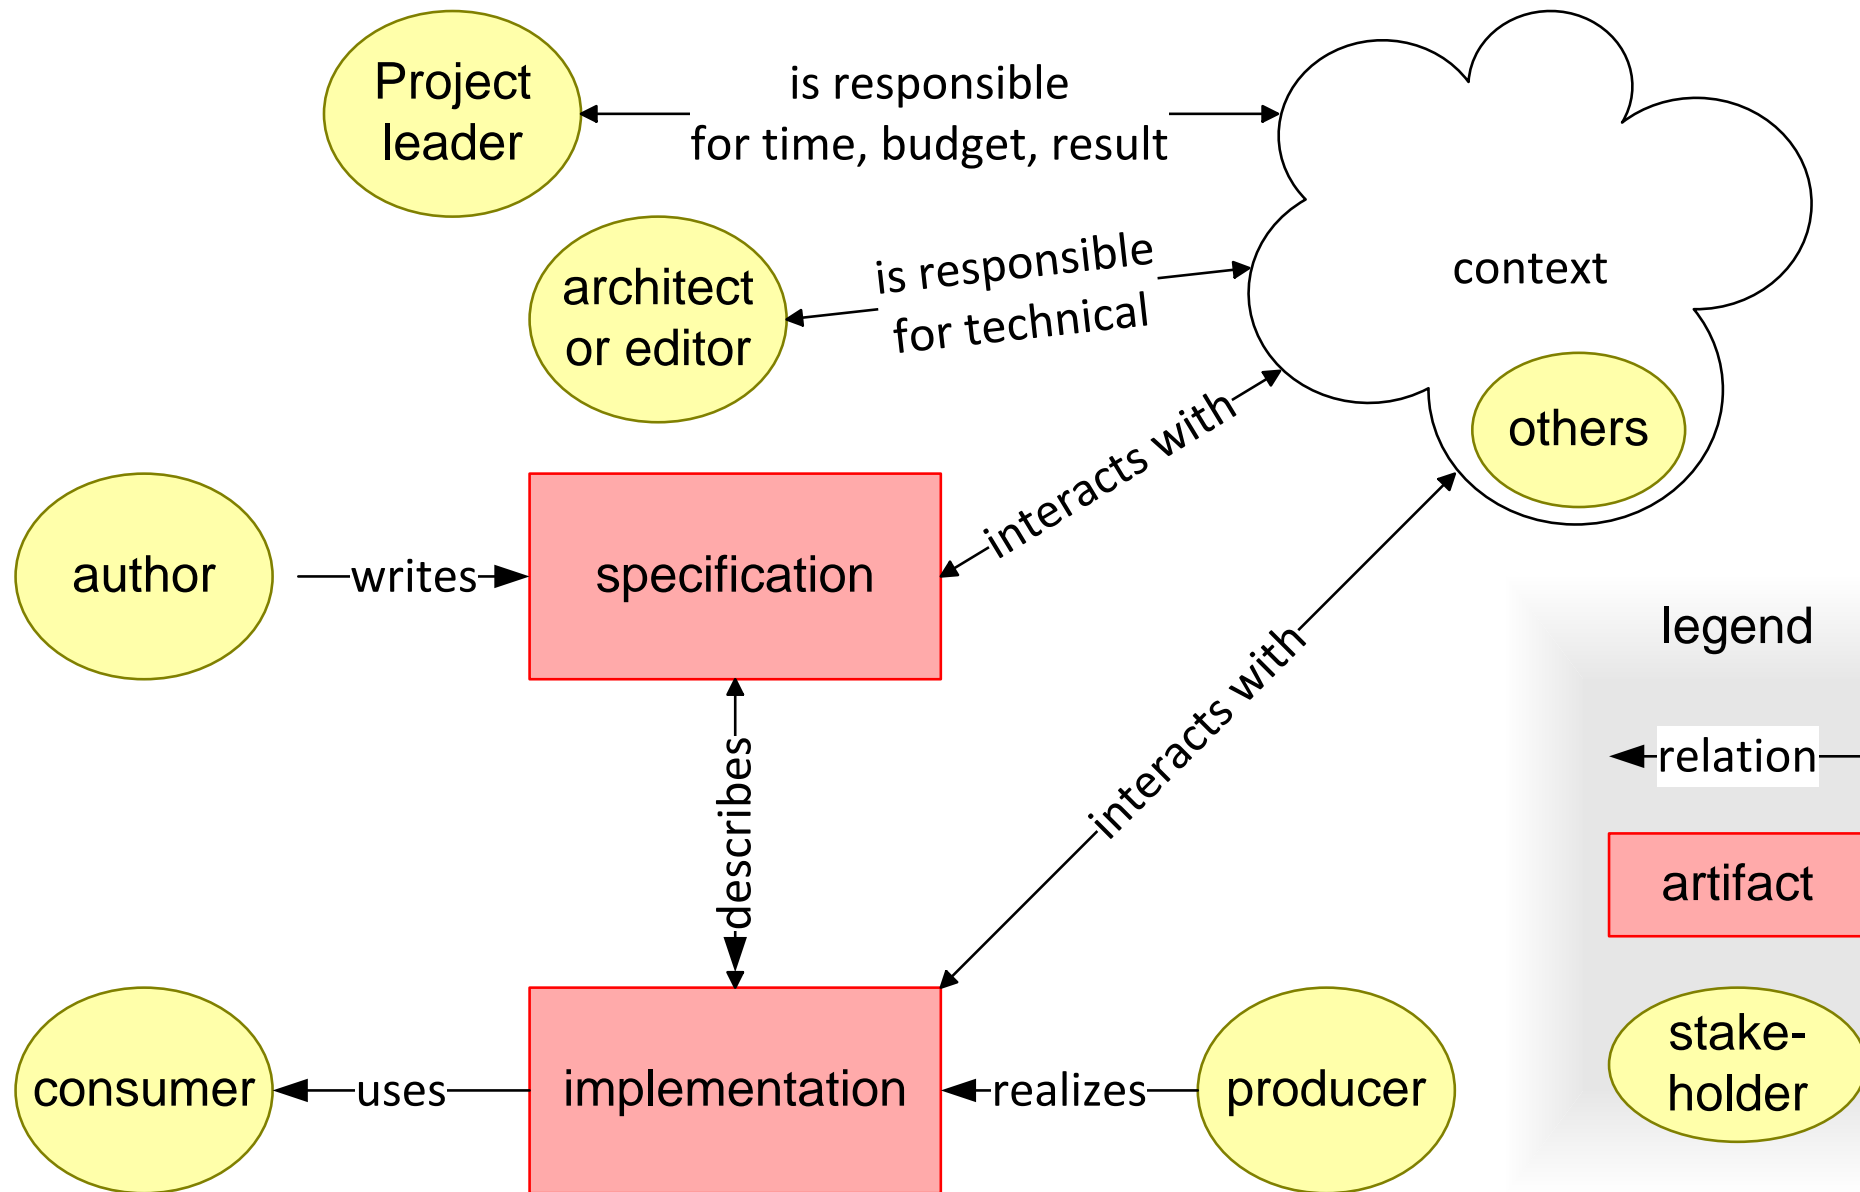

well defined documentation structure

overview specifications at higher  
aggregation levels

recursive application of structure and  
overview

delegation of review process

# LEAN and A3 Approach to Supporting Processes

by *Gerrit Muller*      University of South-Eastern Norway-NISE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

LEAN product development is in the process and means area pragmatic. Low tech tools, such as paper, pen and magnets, with very direct interaction are used. For communication the use of single A3-size documents is promoted, because this is a manageable amount of information.

## Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

March 27, 2021  
status: draft  
version: 0.1

# Characteristics of LEAN

---

A holistic, systems approach to product development including people, processes, and technology.

Multi-disciplinary from the early start, with a drive to be fact based.

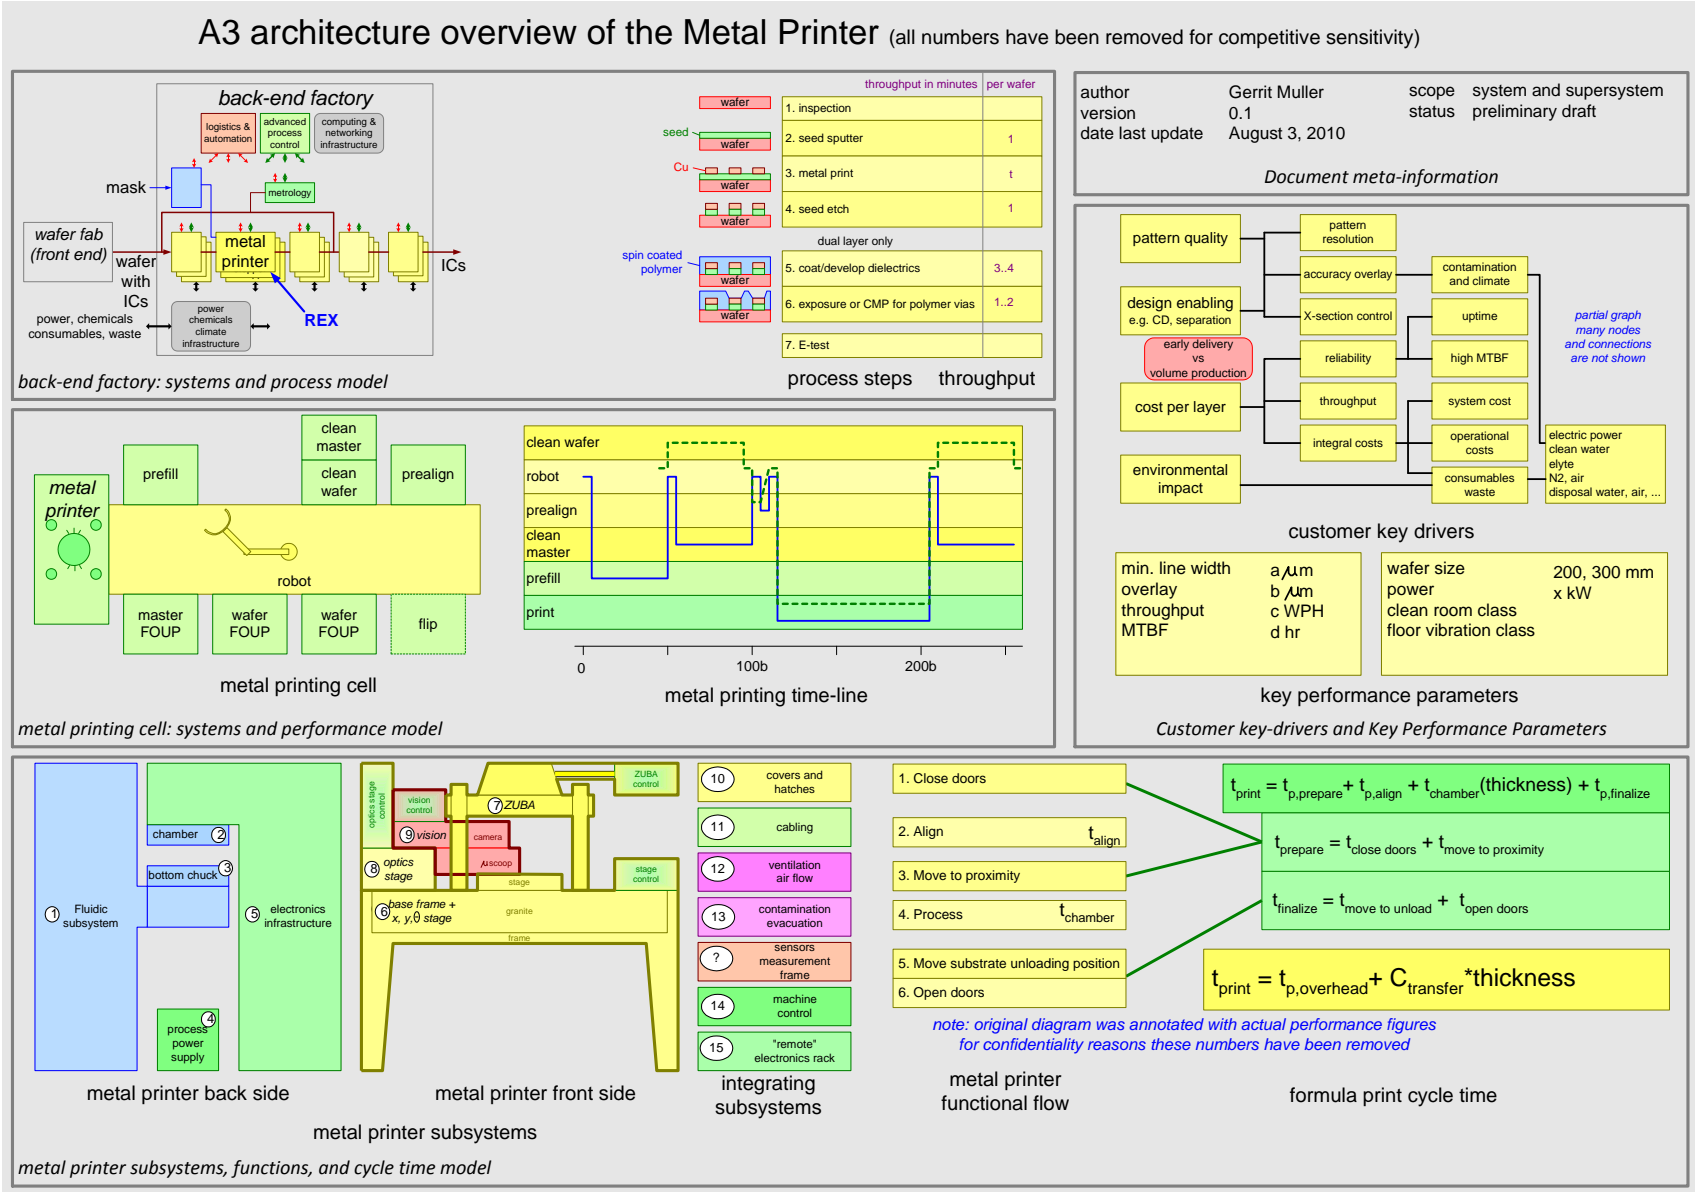

Customer understanding as the the starting point.

Continuous improvement and learning as cultural value.

Small distance between engineers and real systems, including manufacturing, sales and service and the system of interest.

# Example of A3 Architecture Overview

# Light Weight Review Process

by *Gerrit Muller*      University of South-Eastern Norway-NISE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

A light weight review process is described that can be used for documents made during product creation. This review process is focused on improving the contents of specifications as early as possible. The process is light weight to increase the likelihood that it is performed *de facto* instead of *pro forma*.

## Distribution

`www.gaudisite.nl`

## Abstract

The introduction of a new process (way of working) is quite often implemented by supplying ready-to-go tools and templates. This implementation mainly serves the purpose of a smooth introduction of the new process.

Unfortunately the benefits of templates are often cancelled by unforeseen side-effects, such as unintended application, inflexibility, and so on. This intermezzo gives hints to avoid the **Template Trap**, so that templates can be used more effectively to support introduction of new processes.

# Rationale for Templates

---

- Low threshold to apply a (new) process (1)
- Low effort to apply a (new) process (2)
- No need to know low level implementation details (3)
- Means to consolidate and reuse experiences (4)

# Bogus Arguments for Templates

---

- Obtain a uniform look (5)
- Force the application of a (new) process (6)
- Control the way a new process is applied (7)

# Forces of Change: Action = - Reaction

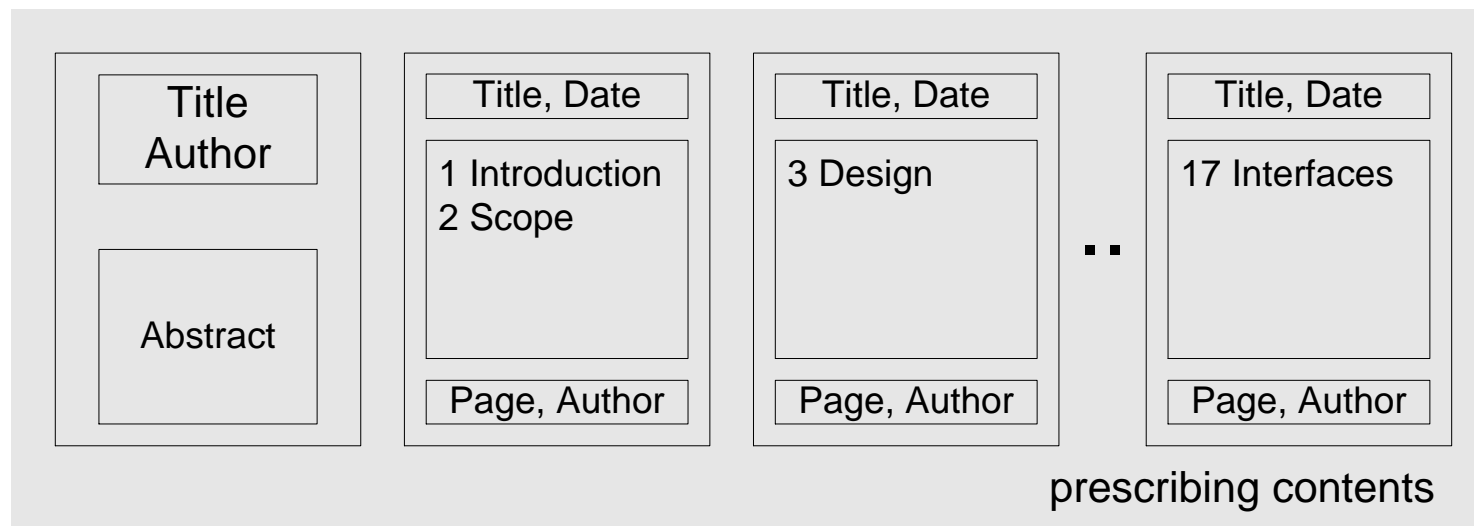

# Template as Support for Process

# Types of Templates

*recommended template type*

# Recommendation

---

template type	context knowhow	value
layout only	no	low
meta information	process	high
prescribing content	process and domain	constraining

- Use templates for meta-information.
- Use checklists for structure and contents.

Templates are an optimization of the Copy Paste Modify pattern:

- Look for a similar problem
- Copy its implementation
- Modify the copy to fulfil the new requirements

# Spiral model: Use before Re-use

# Example Guidelines Meta Information(1)

---

Mandatory per page:

- Author
- Title
- Status
- Version
- Date of last update
- Unique Identification
- Business Unit
- Page number

# Example Guidelines Meta Information(2)

---

Mandatory per document:

- Distribution (Notification) list
- Reviewers and commentators
- Document scope (Product family, Product, Subsystem, Module as far as applicable)
- Change history

## Recommended Practice:

- Short statement on frontpage stating what is expected from the addressed recipients, for example:
  - Please send comments before february 29, this document will be reviewed on that date
  - This document is authorized, changes are only applied via a change request
- See Granularity of Documentation [?] for guidelines for modularization and contents

# Template Pitfalls

---

- Author follows template instead of considering the purpose of the document.
- Template is too complex.
- There is an unmanageable number of variants.
- Mandatory use of templates results in:
  - no innovation of templates (= no learning)
  - no common sense in deployment
  - strong dependency on templates

## **Recommendation:**

- Enforce the procedure (*what*)
- Provide the template (*how*) as supporting means.

# Summary

---

- Templates support (new) processes
- Use templates for layout and meta information support
- Do not use templates for documents structure or contents
- Stimulate evolution of templates, keep them alive
- Keep templates simple
- Standardize on **what** (process or procedure), not on **how** (tool and template)
- Provide (mandatory) guidelines and recommended practices
- Provide templates as a supportive choice, don't force people to use templates

# System Integration How-To

by *Gerrit Muller* USN-SE

e-mail: `gaudisite@gmail.com`

`www.gaudisite.nl`

## Abstract

In this document we will discuss the full integration flow. We will discuss the goal of integration, the relation between integration and testing, what is integration and how to integrate, an approach to integration, scheduling and dealing with disruptive events, roles and responsibilities, configuration management aspects, and typical order of integration problems occurring in real life.

### Distribution

# Typical Concurrent Product Creation Process

# Zooming in on Integration and Tests

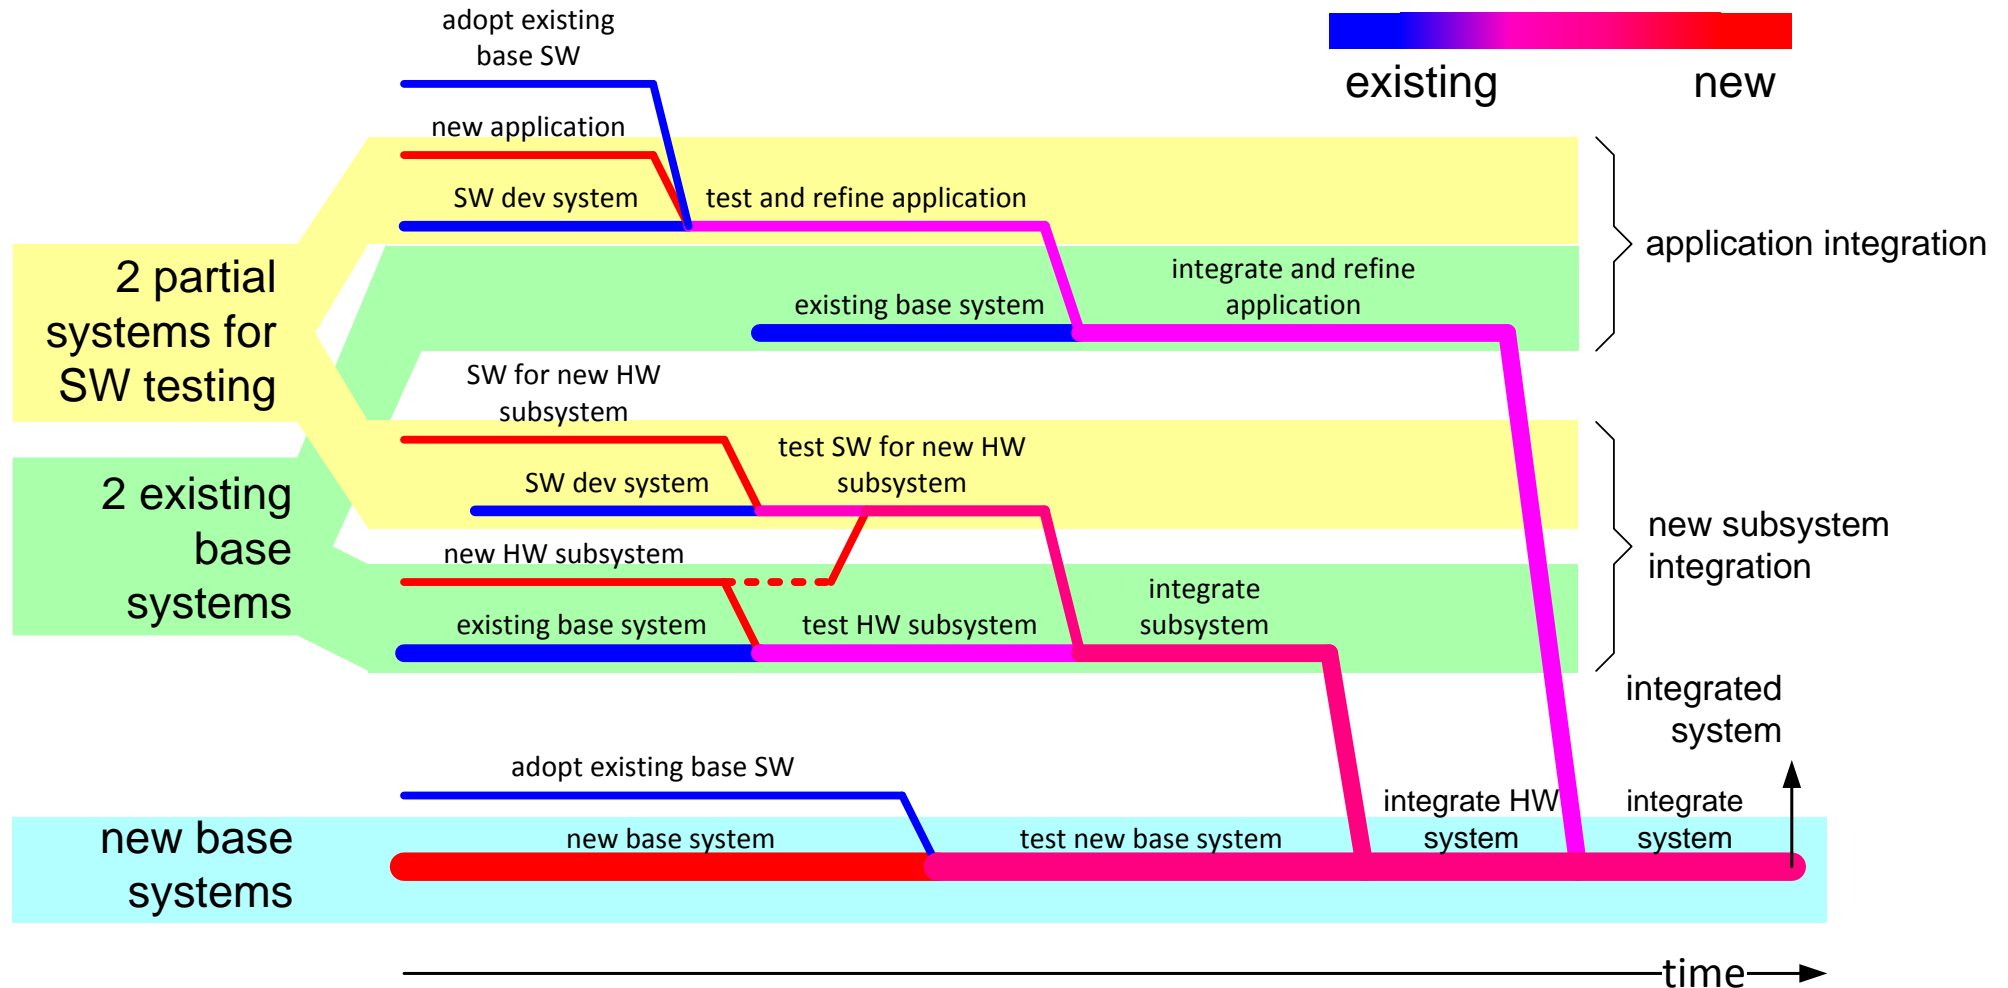

# Integration Takes Place in a Bottom-up Fashion

---

# Transition from Previous System to New System

# Alternatives to Integrate a Subsystem Early in the Project

# Stepwise Integration Approach

---

1	Determine most critical system performance parameters.
2	Identify subsystems and functions involved in these parameters.
3	Work towards integration configurations along these chains of subsystems and functions.
4	Show system performance parameter as early as possible; start with showing "typical" system performance.
5	Show "worst-case" and "boundary" system performance.
6	Rework manual integration tests in steps into automated regression tests.
7	Monitor regression results with human-driven analysis.
8	Integrate the chains: show system performance of different parameters simultaneously on the same system.

# Simplified Process Diagram

# Configuration Management Entities

# Typical Order of Integration Problems

---

1. The (sub)system does not build.
2. The (sub)system does not function.
3. Interface errors.
4. The (sub)system is too slow.
5. Problems with the main performance parameter, such as image quality.
6. The (sub)system is not reliable.

Make a design for the documentation structure of the case, take into account a.o.:

- target audience per documentation module
- lifecycle
- author
- size (budget)

Present (max 1 flip) the proposed documentation structure and the rationale.

# Documentation

## Requirements Entire Documentation

- Accessibility for the readers
- Low threshold for the readers
- Low threshold for the authors
- Completeness
- Consistency
- Maintainability
- Scalability
- Evolvability
- Process to ensure the quality of the information

## Requirements per Document

- High cohesion (within the unit)
- Low coupling (outside of the unit)
- Accessibility for the readers
- Low threshold for the reader
- Low threshold for the author
- Manageable steps to create, review, and change
- Clear responsibilities
- Clear position and relation with the context
- Well-defined status of the information
- Timely availability
