Abstract

All assignments of the course Systems Engineering Fundamentals.

Distribution

This article or presentation is written as part of the Gaudí project. The Gaudí project philosophy is to improve by obtaining frequent feedback. Frequent feedback is pursued by an open creation process. This document is published as intermediate or nearly mature version to get feedback. Further distribution is allowed as long as the document remains complete and unchanged.

September 1, 2020 status: planned version: 0

ned

logo

TBD

Case

Propose a Non-Lethal Urban Crowd Controller

Sketch the system-of-interest

Sketch some of the **environment** the system will be operating in

Sketch some of the system internals

Draw the system boundary

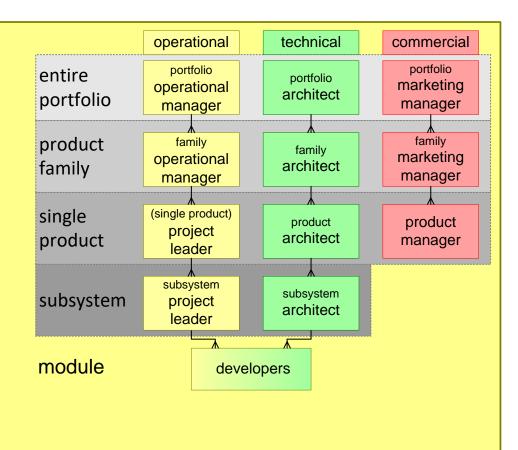

Map the Operational Organization

Make a map with names of individuals in the operational organization of one project and its context

Identify the relationships of the project core team:

- geographical
- organizational
- psychological

Sketch Mission and Scenario

Sketch

a typical mission

and a specific scenario.

The scenario needs to be highly specific:

- numbers (how much, how far, how accurate)
- names (where, who)
- circumstances (when, where)
- actions (what, how)

Identify Stakeholders and Concerns

Brainstorm stakeholders

Brainstorm for each stakeholder the concerns

Elaborate concerns in 5 to 10 words, make them more specific

Use the mission and scenario for inspiration

Sketch the System Life Cycle

Sketch the system *life cycle*

from idea until decommissioning and recycling.

Identify stakeholders per phase or activity

Identify Needs and Capabilities

Identify stakeholder needs

in terms of *capabilities*.

Capabilities typically are functions

with quantifiable characteristics

Use the mission, scenario, and stakeholder analysis for inspiration

Determine Key Performance Parameters and Use Case

Determine 5 to 10 *Key Performance Parameters* (KPP) of the System

Quantify these KPPs

Define the KPPs roughly, using a *Use Case*

Perform a Concept Selection

Make a decision matrix for one of the concept selections.

- define at least 3 concepts
- define 7 to 10 criteria for selection
- score the concepts against the criteria, for example using a scale from 1 to 5: 1 = very poor, 5 = very good
- recommend a concept with a rationale

	concept 1	concept 2	concept 3
criterion 1	1	3	5
criterion n	4	4	2
			best, because

Show Dynamic Behavior

Model the Dynamic Behavior of the System.

Focus on the Dynamic Behavior that relates to the KPP.

Visualize the Dynamic Behavior with various sketches, diagrams, or graphs (see Visualizing Dynamic Behavior for inspiration).

Make a System and Work Breakdown

Make a *system breakdown*

in subsystems and subsubsystems

and a work breakdown structure

to assist in organizing the project

Sketch the Goods Flow

sketch the goods flow

from (sub) suppliers

via **assembly** and **test**

to *customer site*,

deployment,

and *maintenance*

Assess risks

- feasibility of achieving KPPs
- fitness for purpose in customer context
- integration configurations and testware
- supplier and logistics status
- technology readiness
- development and resource status

Determine *probability* and *severity* per risk

Determine an Incremental Integration Sequence

Determine an incremental *integration sequence* to build confidence in the KPP ASAP.

Strive for about 6 main increments.

Reason starting at the end result and then backward in time.

For each increment determine its prerequisites in terms of parts, interfaces, functions, and performance levels.

Transform Sequence into a PERT Plan

Transform the integration sequence and the planning from the other perspectives into a *PERT-plan*.

A PERT-plan focuses on *activities* and their mutual *relations*; the logic of the plan. Time and resources are secondary information.

Sketch an Installation and Commissioning

Sketch an installation

and *commissioning*
